

Mosaic
SAMPLE MANAGEMENT SOFTWARE

Mosaic

Comprehensive sample management software for all types of sample inventory in any size of organisation

1 billion+ samples managed worldwide

20 years of industry knowledge

Scalable to meet future needs

Mosaic: every sample is precious

Built on 20 years of experience in sample management, Mosaic software enables you to manage your samples cost-effectively for the complete Sample Management lifecycle.

Whether you have a local single-site sample store, or a worldwide multi-site inventory, use Mosaic software to manage all sample types - including small molecules, reagents, DNA, proteins, antibodies, cell lines, blood, serum and tissues.

Manage Any Sample

Manage and record the details of any sample with Mosaic's flexible and intuitive interfaces.

Management of Diverse Sample Types

From small molecule compounds to tissue libraries

Thorough Audit Trails

With 21 CFR Part 11 compliant audit trail, including who, what and when

Fewer Human Errors

Fewer errors in sample preparation and associated data handling

Flexible & Efficient Processes

Embrace the safety and security of a software solution built with 20 years of hands on industry knowledge.

Simplified Operations

Within the lab, freeing expert staff from repetitive machine setup tasks

Process Efficiency

Change your lab processes with our easy to use interfaces - without needing to call in your IT team

Scalability

Meet your library size and application-specific requirements

Visit titian.co.uk

Grow With Your Needs

Mosaic works the way you need it to, and can develop to meet your future needs.

Inventory Tracking

Mosaic's inventory database is a central repository for inventory information such as sample amount, concentration, location, labware type and diluent

Ordering

Mosaic provides a number of ways to place sample orders to reflect different scenarios and integrate with different systems

Sample Processing

Mosaic supports a range of different capabilities within the lab, according to the throughput demands and the availability of automation

Assay Requesting

For frequently performed assays, the requestor can simply list the compounds to be run in their preferred assays. The preparation of the pre-defined assay items is then managed centrally and efficiently

Automation Integration

Mosaic's extensive integration with a range of automated stores and instrumentation supports entire workflows and lab productivity, with improved accuracy and consistency

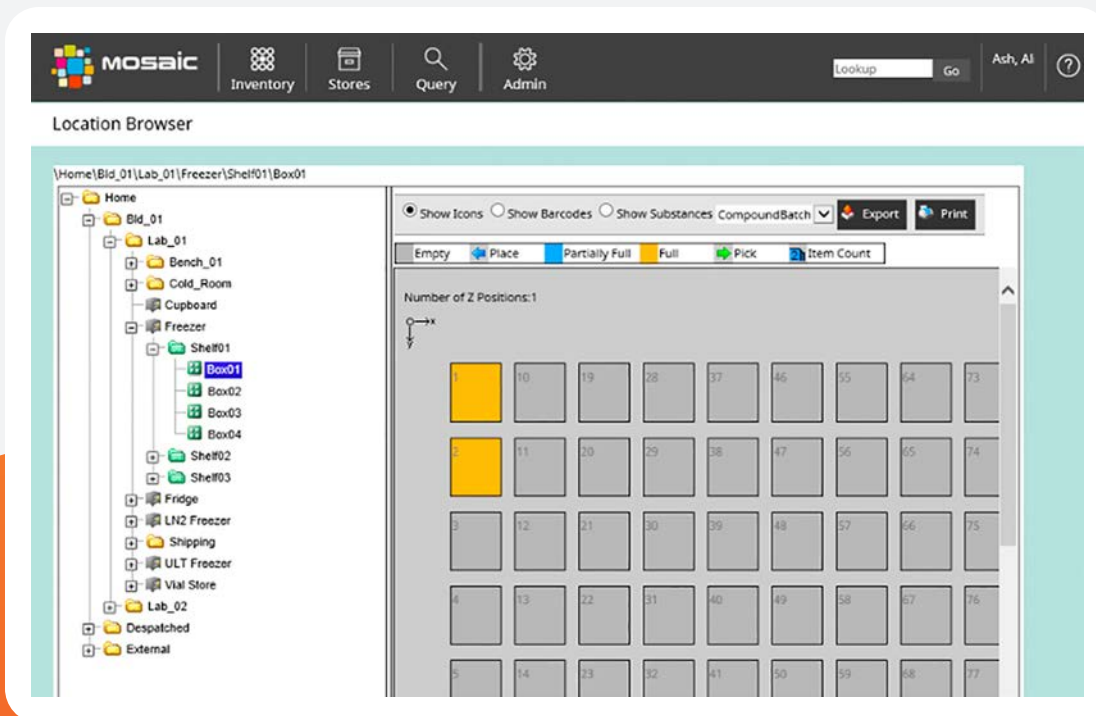

Tracked Shipping

Confidently manage the distribution of samples off-site and around the world

Connectivity

Mosaic is frequently used in conjunction with third-party informatics systems and instruments. If you have a specific integration in mind, contact us and we can advise on the best possible integration method to use

We help lab managers move away from spreadsheets to the safety and security of systems built with 20 years of hands on industry knowledge

Expert Consultancy & Support

To create your ideal Mosaic system, Titian's experts will:

Discuss your sample management needs

Provide a detailed explanation of the options available

Assess your infrastructure and work with you to develop a strategy for implementation

Develop, install, and train your staff to use your tailored Mosaic software
