

We solve problems with technology.

We're not your typical dev shop. Not your typical IT consulting firm. We've been here since 1998 -- before the "dot-com" boom (the first one) and long enough to maybe even have a little grey in our hair. You can't come to our office, because we don't have an office: we went 100% remote before "must be willing to relocate to SF" was even a thing. And all along, as we built this unique company from the ground up, we were assembling a team of talented expert generalists. People with a stunning breadth and depth of experience. A team who live and breathe solving problems through the creative, focused application of technology. People who can't wait to help you solve the most formidable problems facing your business.

devops

Weren't APIs supposed to make everything easier?

The promise of APIs was that they were going to make system integrations as easy as sticking together some LEGOs™—in reality, it's more like wiring an extension onto your house in a world where building codes don't exist. Your finance system has an API. Your business intelligence ("BI") system has an API. Your partners' systems all have APIs. But despite the promise, those systems often don't talk to each other, don't share data, don't work together smoothly.

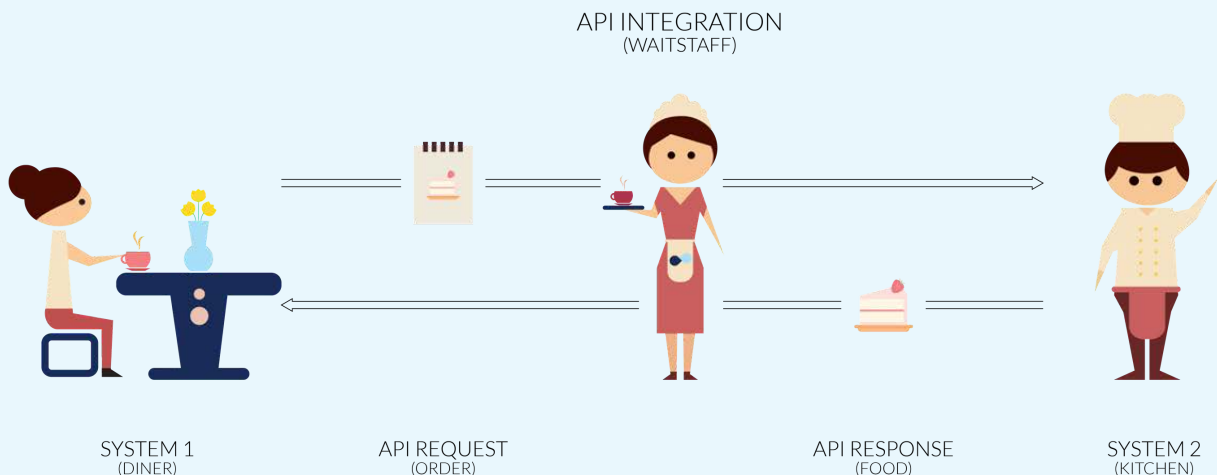

What can we solve for you?

solutions@iinteractive.com | 800.646.0188 | iinteractive.com | @iinteractive

How can you realize the power that you were promised with APIs?

You need a partner that not only understands APIs, but also one that can understand exactly what pieces of data your business needs to exchange over those APIs, so you can leverage them to create flexible workflows to seamlessly automate your business tasks. A partner with decades of software development experience that's worked with APIs across a wide variety of industries, from finance to healthcare, from accounting to ad tech. Whether those APIs are industry-standards (e.g. Google, Salesforce, Twitter, Twilio), old dinosaurs with batch operations masquerading as an API (ouch), or homegrown niche software, we have the experience to help you realize your strategic goals.

API integration explained:

Lipitor for lower cholesterol

Understanding your cholesterol

The risk of heart disease

Talk to your doctor

Currently taking Lipitor?

Lipitor Prescribing Information

Ask your doctor if Lipitor, the #1 prescribed cholesterol-lowering medicine is right for you. It could make a difference.

Important information about Lipitor:
LIPITOR (atorvastatin calcium) tablets is a prescription drug used with diet to lower cholesterol. LIPITOR is not for everyone, including those with liver disease or possible liver problems, and women who are nursing, pregnant, or may become pregnant. LIPITOR has not been shown to prevent heart disease or heart attacks.

If you take LIPITOR, tell your doctor about any unusual muscle pain or weakness. This could be a sign of serious side effects. It is important to tell your doctor about any medications you are currently taking to avoid possible serious drug interactions. Your doctor may do simple blood tests to monitor liver function before and during drug treatment. The most commonly reported side effects are gas, constipation, stomach pain and indigestion. They are usually mild and tend to go away.
