

Patient Matching Quality Assessment

If yours is like many hospitals or hospital systems, you have some level of duplicate patient records in your EMPI (Enterprise Master Patient Index) or other patient matching solution, and this can adversely affect patient care. But, many hospitals don't know their patient duplicate rate. Determining your percentage of duplicate patient records, and fixing the situation, can improve patient outcomes, patient satisfaction, and operational efficiency.

It's important to identify and reduce duplicates for many reasons:

- Increases accuracy of data tied to Meaningful Use incentive payments
- Enhances patient safety and quality of care
- Reduces risk of improper tests and incorrect diagnoses
- Improves accuracy of population health quality measures
- Decreases duplicate testing
- Reduces costs related to unnecessary testing

Deliver the right care to the right person at the right time.

Take advantage of Iatric Systems Patient Matching Quality Assessment.* This valuable assessment identifies your hospital's duplicate rate so you can take steps to improve it. This assessment includes:

- **Phone Interview:** Spend 15 to 30 minutes with us to discuss your needs and determine your data requirements
- **Statement of Work:** Receive an outline of how the analysis will be conducted
- **Deliverables:** Get your duplicate rate and 8 reports detailing duplication results

The results of this assessment will help your hospital make informed decisions about how to eliminate duplicate records in order to improve patient safety and operational efficiency. [Request your assessment now.](#)
