

CorasNow — Business Application Platform for the Enterprise

In today's complex world of computing, there are many advantages that can be derived from having your applications running on a common platform. The key advantage of this "aggregation" is cost savings due to your ability to focus your resources and improve the productivity of your IT and development teams. And it's not just your technical teams that see this improvement, it's your business users, as well. The productivity gains come from the ability to quickly develop and modify apps, the speed at which you can deploy apps, and the familiarity of a common platform for maintaining and supporting your apps.

CorasNow is a business application platform that fundamentally changes how organizations develop, modify, deploy, and manage their collaborative applications. It's no longer about lengthy requirements docs, long development cycles, or shadow IT. It's now about agility, flexibility, speed, visibility, and giving business users exactly what they need, when and how they need it.

CorasNow is an integrated set of programs and services that drive your business. It unifies all of your data, processes, and apps into a single platform that includes development tools, execution services, data services, and cloud services.

Benefits

All your apps under one umbrella

Gain significant economies of scale by having all your apps running on the same platform. Reduce development and maintenance costs, drive down support costs, and gets apps to your users faster.

Quickly adapt to change

Quickly deploy and modify collaborative applications to meet the needs of users. As requirements change, or new needs arise, rapidly update or modify existing apps or build and deploy new ones.

Runs anywhere

Deploy in our public cloud, in your own private cloud, or even behind your own firewall. Unlike others, we deliver the same great platform regardless of where it lives. It doesn't matter to us.

Customer Example

A global communication technology company is leveraging CorasManage, running on CorasNow, to integrate, streamline, and manage its grants management business. Through CorasNow, the company was able to quickly integrate four independent data sources using the platform's integration framework to create a unified application for the users. It also was able to apply other modifications and develop custom features and capabilities using the Visual Application Designer and the extension framework. Because CorasNow is based in the cloud, the company was able to rapidly deploy the application and can scale the application as user demand changes and grows.

Features

Build and modify apps - Quickly create your own unique apps that meet your exact needs. And do it 75% faster than traditional methods. Our Visual Application Builder is designed with “ease of use” in mind, and lets you create data tables, forms, views, user actions, charts, and dashboards...all without writing a single line of code. Just drag and drop elements for a true “what you see is what you get” experience.

Deploy apps - Why recreate the wheel every time you need to solve a new problem? With CorasNow, you have multiple options: 1) create an app using one of our pre-designed templates, 2) start with apps you’re already using and replicate them for others to use, or 3) start with an existing app and modify it to meet another need.

Manage your apps - CorasNow includes a robust suite of management tools that allows IT to catalog apps, manage the application pipeline, and rank and prioritize apps for budget purposes.

Manage Your Documents - With CorasNow you can upload, launch, view, and manage your documents. Plus, you can create processes to push those documents through review cycles and approvals.

Integrate your data - Our robust integration framework allows you to connect to and work with data in almost any other application or database. Use our out-of-the-box connectors to common data sources like SharePoint, SQL Server, Office365, Salesforce, and more. Or, create custom connectors with our visual design tools.

Support for Open Standards - Give developers the ability to extend CorasNow by supporting open standards, including HTML, CSS, or JavaScript, using familiar web development tools like KnockOut, Kendo, Bootstrap, or HTML5.

Highly Scalable - Maintain or increase your level of performance and efficiency, and add users and apps quickly and easily as your operational demands change and grow.

Secure - CorasNow uses proven industry standards and security practices to ensure the platform is safe from external threats. Customer data is stored separate from all other data, in isolated customer specific databases. Access to the databases are restricted to the IP address of the web application server which requires authenticated CorasNow user accounts.

Flexible Deployment - CorasNow run in any operating environment—public cloud (i.e., multi-tenant environment), private cloud (e.g., Azure, Amazon Web Services, Verizon), or on-premise behind your firewall.

Mobile First - Every application is designed to be mobile first. The responsive design means all apps render the way they should on any device - cell phone, tablet, laptop or desktop.
