

“ We are increasing the speed of decision making. ”
- U.S. Navy

CORAS Rhapsody

provides command and control for your mission data, so you can start with the truth, ask “what if,” make informed decisions, and defend them.

Faster access to the information you need to make confident decisions.

A more accurate view of your mission programs and their performance.

Faster, more comprehensive, more objective reporting.

Software that gets better over time from a team that’s as committed to your mission as you are.

Your Decision Visualization Engine

CORAS Rhapsody is an enterprise managed service that delivers a command and control information system tailored to support your mission’s unique reporting, business intelligence, and decision-making needs.

The annual subscription includes unlimited access to our decision visualization platform, as well as a team of experts who partner with you to configure modules according to your mission’s exact requirements.

Using the Rhapsody service, mission commanders visualize data aggregated from front-line sources, explore “what-if” scenarios, model decisions, and track progress.

CORAS Rhapsody grows and evolves over time with both enhancements to the underlying platform and ongoing refinements optimized for each client’s unique command and control experience.

At CORAS, we believe that reports should not only be automated, they should be interactive. We believe they should model decisions, not just inform them. And we believe the human element should add value, not spin.

See the ground truth

Understand where you are and where you're going—without filtering or spin.

- Get an interactive command and control information system in a single pane of glass.
 - Connect to existing data sources, without migrating them to a new system.
 - Use data visualizations that already work for you and your stakeholders.
 - See more detail when it's necessary, less detail when it's not.
 - Identify trends and “ugly truths.”
-

Reduce churn and burn

Get the big picture and the fine details in several clicks, not several months.

- See your mission data the way you want, with the push of a button.
 - Instantly switch views to communicate the big picture and important details relevant to each stakeholder.
 - Record information at the data source, confident that your reports will update automatically.
 - Keep a central record of what you do, how you do it, and why to preserve knowledge as people come and go.
 - Get new visualizations and software logic on a continual basis.
-

Make decisions you can defend

Model your decisions before you make them, so you understand their potential impact.

- Configure the system to answer common questions and new ones that arise.
 - Explore “what if” scenarios using real data.
 - Evaluate readiness against potential events at various points in time, across multiple programs.
 - Defend your budget decisions by demonstrating the impact of alternative choices.
-

Subscribe per mission, not per user

Pay for benefits that your mission needs, not for user accounts or consultants that it doesn't.

- Pay a standard flat rate for a six-week pilot.
- Negotiate an annual subscription based on the complexity of your mission data and the visualizations you require.
- Go live in months, not years.
- Improve your system on a continuous basis with our developers and data scientists.
- Benefit from platform enhancements made for other customers.

CORAS Rhapsody is a FedRAMP ready solution that can be deployed on-premises or to any compliant public or private cloud.
