

Worksmart Achieves ISO 27001 Certification

The Worksmart team are thrilled to announce that we have been certified to meet the requirements of standard **ISO/IEC 27001:2013 Information Security Management System**. This is the culmination of a great deal of work across the Worksmart business over the last two years.

Since we started hosting software on behalf of customers in the mid 2000's we have been dedicated to providing robust Information Security Management (ISM), and our customers have benefitted from this commitment. By documenting and refining our processes we have been able to successfully achieve this internationally recognised certification as a clear independent endorsement of our approach to protecting customer information.

Information Security is a cornerstone of Worksmart's business and ISO 27001 certification shows that this has been tested all the way from the data centre to office processes and recruitment. The practice and refinement of Information Security Policies remains a clear focus for Worksmart moving forward, we will not be resting on our laurels as we strive to further improve ourselves.

Andy Nightingale, Worksmart's Managing Director, said;

"Although it's been hard work, we are absolutely delighted to have achieved ISO 27001 certification. Certification shows that our Information Security management processes are robust and as a result customers and prospects can be confident that we can be trusted with their data. We are proud to have some of the biggest names in financial services as our customers and ISO 27001 certification is a key part of our commitment to the continuing mutual trust in those partnerships.

A special thanks must go out to everyone in Worksmart who has worked tirelessly to help us achieve this award, it has been a team effort and the management team and board thank you all for your efforts."
