

Tehama Service Delivery Platform

Revolutionizing how businesses engage and secure a global workforce

Leveraging a third-party workforce is fraught with risk. Tehama makes it safe and secure to onboard, manage, and scale a distributed and dynamic workforce.

Secure all access

Enable secure, privileged access for remote workers and third parties.

Ensure regulatory compliance

Monitor and record sessions and users for a complete audit trail.

Employ a complete solution

A ready-to-work solution without any of the getting ready.

Achieve business agility

Leverage an on-demand and adaptable workforce approach.

Reduce your cost

Replace infrastructure needs, leverage automation, and improve process.

Enterprise access security challenges

In our connected world of digital business and the Internet of Things, security risks for enterprises have never been greater. But your global workforce needs to securely connect and collaborate—without risk to enterprise data and business.

Current solutions require manual, multi-vendor product integrations. These result in IT inefficiency, slow time-to-market, and lack of scalability. Worse yet, you're vulnerable to new risks and data loss.

How can you manage the risks and provide secure access, audit, and compliance for employees and third parties?

Tehama Service Delivery Platform

Launch integrated and productive work environments—in minutes—with the Tehama Service Delivery Platform (SDP). This secure and SaaS-based solution provides everything you need to quickly onboard and manage your global workforce.

We create the firewalls, the storage, the end-user compute infrastructure, and the security and access policies, all in one place. These contained and collaborative workspaces operate as a virtual extension of your business infrastructure in the cloud. The result is more security, more control, more isolation—with almost no setup time.

Secured access for all

Leverage access controls, policies, and secure password vaults to provide remote workers and third parties with controlled and monitored access to secured corporate assets. Create workspaces that isolate threats while enabling productivity and collaboration among privileged users.

Each workspace is securely isolated, with policies and access rules that put you back in control. This architecture dramatically reduces your organization's overall threat surface and makes it simple to provide controlled access to any employee or third party—regardless of device or location.

Regulatory compliance

Ensure that all remote workers and third parties adhere to regulatory compliance standards. The pre-built, compliance-in-a-box workspaces meet security and regulatory standards, including GDPR, SOC 2, OSFI, and FIPS.

Forensic auditing includes session recordings and storage. There's also real-time activity monitoring. You benefit from not only regulatory compliance, but also enhanced governance.

A complete solution

The Tehama SDP provides all the components required to quickly and securely onboard and manage your global workforce—without the complexity of owning and integrating virtual desktop infrastructure (VDI), Desktop-as-a-Service (DaaS), and tools for privileged access and security management.

There's no infrastructure. It's a "ready-to-work" solution without any of the getting ready.

Business agility

Increase business agility through controlled, collaborative workspaces and SaaS-powered automation. Higher productivity improves your time-to-market. The Tehama SDP also provides faster, controlled access for third parties and short-term engagements. The solution is flexible, supporting a wide variety of use cases. So, you can choose how to organize your secure resources for efficiency and collaboration. And it can scale up or down—at the speed of SaaS—as your business needs change.

Reduced cost

The Tehama SDP drives massive cost efficiencies by avoiding IT infrastructure completely. Quickly onboard developer teams by avoiding manual processes with on-demand SaaS capabilities—and reducing OPEX. You'll also enjoy lower CAPEX for hardware and software. Faster time-to-market means faster time-to-revenue.

Use Cases

By providing a comprehensive platform for all your IT service needs, Tehama solves a wide range of today's critical challenges faced by business executives, IT leaders, and the providers that serve them. To learn how Tehama can remove barriers to execution and empower your global workforce to reach new levels, read our [use cases](#).

About Tehama

When *Pythian*, a global IT Services provider, needed to improve agility and security when connecting to global customers in an expanding global market, the Tehama Service Delivery Platform (SDP) was created to deliver better IT outcomes, faster, and more securely.

Eager for the same benefits of agility and security, Pythian's customers and partners began requesting access to the Tehama SDP, to securely onboard other service providers and apply continuous auditing and compliance across their services supply chain.

Tehama operates as a business unit of Pythian. Our goal is to bring the values of "delivering better IT outcomes, faster, and more securely" to the industry, and to revolutionize how services are delivered across the entire IT services ecosystem.
