CASE STUDY

► Project Data

- PROJECT: Glencairn Lodge, Fraserburgh
- CLIENT: Meallmore Ltd
- SUMMARY: Supply 80 DeepClean sloping top radiator guards with back brace and external bi-directional TRV kit

DeepClean sloping top radiator guards

Market-leading radiator guard supplier, Contour, has recently provided a comprehensive, multi-phase LST package to a significant Scottish care organisation.

Meallmore Ltd is one of the foremost providers of innovative and ethical health and social care, with premises located throughout Scotland and boasting the ISO 9001 International Accreditation for quality assurance each year for the past eight years.

Contour were chosen to supply almost one hundred of their pioneering DeepClean LST radiator guards to the latest addition in the Meallmore Group, Glencairn Lodge in Fraserburgh. The guards were supplied over four phases, with deliveries staggered over a five month time period.

Contour's range of innovative and aesthetic LST radiator guards are backed-up by a unique service package, including free site surveys, split deliveries, exclusive patented features, a dedicated technical support department and a supply & fit service.

Contour's DeepClean LST radiator guard was specified because of the synergy between its features and the needs of care home clients. The guard incorporates a unique, patented, full-access front door which can be lowered down to floor level by one cleaning operative - without assistance from estates. This facilitates access to every internal surface for cleaning and maintenance, improving hygiene standards and raising efficiencies and reducing operating overheads.

Every radiator cover incorporates BioCote® anti-microbial technology as standard, delivering up to 99% protection against harmful bacteria and infection, including MRSA and E.coli. Safe radiused corners prevent injuries in the event of falls and slimline designs minimise loss of floor space.

With a one-piece construction and all cut-outs programmed into manufacture, it means that no assembly is required, dramatically reducing disruption, mess and installation time. Safety grilles are radiused to eliminate unhygienic dirt traps and are small enough to prevent fingers being trapped and stop small items from being dropped inside. Contour also offers a range of anti-ligature features for application in secure environments.

For comprehensive information on Contour's entire radiator guard range, or to arrange a free site survey, call 01952 290 498, or email sales@contourheating.com
