Medical Gas Trunking

The medical pipework solution for all healthcare and environments.

Contour's Medical Trunking System encapsulates and protects medical gas pipes, enhancing patient comfort and providing clinical functionality.

Coated in Biocote© antimicrobial protection, Contour's Medical Gas Trunking helps stop the spread of dangerous bacteria, including MRSE and E.coli.

Other services such as electrical sockets, nurse call alarms and light switches can often be integrated into the same trunking, offering more clinical functionality. If this is required, please let us know. This will allow us to pre-punch the cut-outs required to accommodate these services.

Product Benefits:

- BioCote© anti-microbial protection, proven to reduce germs and microbes on surfaces by 99.96% in less than 2 hours.
- Pre-fabricated cut-outs to ensure there is no need for noisy and messy on-site cutting
- Space saving and easy installation
- Constructed with 1.2mm Zintec mild steel, ensuring robust performance in the most demanding of environments
- Earthing points can be added if required
- Radius edges to ensure additional safety to patients and staff
- Bespoke design to give flexibility when ordering
