

Moisture Matters...

Ideal moisture 11%

When dry trimming with an automated trimmer, the condition of your flower is key. This is true with any style of trimming. While impossible to handle every strain or flower type on the planet, Twister Trimmers are designed to handle most conditions, and they are extremely capable at handling nearly everything you load into it. That said, you'll want to pay close attention to a few variables.

When trimming dry, you'll want to trim your flower at a moisture level between 10-13%, where the outside material of your flower is dry but the inside is spongy moist. How to test? Lightly squeeze the bud between your thumb and finger. If it crumbles, the product is too dry. If it stays squeezed it's too moist. If it bounces back, it's just right!

	Twister T6	Twister T4	Twister T2
Grower	Home	Small-Medium	Commercial
Unit Type	Table top	Floor	Floor
Approx. Harvest Size	0-10 lbs	20-60 lbs	75 lbs+
Portability	☆☆☆☆	☆☆☆☆	☆☆☆
Processing Capability	☆☆☆	☆☆☆☆	☆☆☆☆☆

Your Output @ 11%

1.5-4.0 lbs/hr

8.4-11.2 lbs/hr

14-16.8 lbs/hr

Pro Tip [Get more trimming tips online http://www.twistertrimmer.com/harvesthub](http://www.twistertrimmer.com/harvesthub) 

Some machine trimmer manufacturers promote "drying down" your flower product to levels below 8% moisture content. While this may help these "disc-style" trimmers to work properly, drying to levels below 8% dramatically reduces the weight of your flower and promotes a "rock tumbled" look and feel which in today's market is less attractive. Trimming at 11% with Twisters allows for higher moisture content, leading to higher yields, better weight, and a better manicured look and feel on your finished trimmed product.
