

IVF Timeline

Day 19-21 of Cycle

Bloodwork and ultrasound done in office to confirm ovulation

Once confirmed

Start on oral Provera in order to prep body for cycle (on medication for approx 1 week)

Day 2 or 3 of Cycle

We'll do a baseline ultrasound and bloodwork, and then give the initial medications to start stimulation

Approximately 10 Days of Stimulation

During stimulation, you will be seen at our practice frequently to monitor follicle growth

Final Day of Stimulation - Follicles Mature

(approx. 18-20 mm)

Trigger injection instructions given to patient and administered that evening at home

36 Hours Later - RETRIEVAL

Retrieval of eggs

Same Day as Retrieval - FERTILIZATION

On the same day as your retrieval, fertilization occurs with sperm (From partner or donor, fresh or frozen)

Day After Fertilization Report

Fertilization report from our lab comes in to see how many became embryos

At Day 5 or 6, We Check the Final Embryo Development

For a Fresh Transfer

TRANSFER OCCURS on day 3 or 5 of cycle

2 weeks after transfer occurs, blood test confirmation of positive pregnancy!

At day 5 or 6, can also do an embryo biopsy for PGT - Preimplantation Genetic Testing

Then, move to the frozen embryo transfer process documented below

For a Frozen Transfer
