“ Changing the way we think about waste. ”

Industrial & commercial recycling

Due to legislative and policy developments in protecting our environment, waste management has become an important component of managing any business. Failure to manage waste responsibly will have increasingly negative financial implications, either in escalating landfill fees or fines.

WastePlan manages all **general, organic, hazardous and recyclable waste** and reports on the entire waste stream in a manner that complies with HACCP and ISO 14001 standards.

It is our business to recycle and conserve resources, thereby helping our clients comply with environmental legislation. Allow us to do what we do best on your site, while you look after the bottom line.

We service the following types of businesses:

- Food Factories
- Hospitals
- Distribution Centres
- Manufacturing Companies
- Shopping Malls
- Office Blocks
- Hotels
- Education
- Wine Farms

Residential recycling

South Africa is facing a waste crisis – we are running out of landfill space at an alarming rate.

WastePlan **collects, sorts and recycles** household recyclable waste from residential homes and complexes. This initiative is saving natural resources, as well as prolonging the life of our landfill sites.

Visit our website for a list of suburbs we serve – www.wasteplan.co.za

Events recycling

WastePlan is the Waste Management and Recycling partner of many iconic events in South Africa (some of them are listed below):

- Cape Argus Pick n Pay Cycle Tour
- Old Mutual Two Oceans Marathon

What we do

We specialise in managing waste on-site in such a manner that it will save you money, help you comply with environmental legislation and reduce the waste you send to landfill.

Our services include the following:

1. On-site sorting

If you generate waste, you should have a waste area and this area is a risk that needs to be managed by a professional. Our staff will keep your waste area clean; sort your recyclables into the different streams, and minimize the waste you send to landfill. This will result in less cost, and a greener footprint.

2. Waste reduction

We will do a waste audit free of charge, apply our formulae to your current waste streams and if we can reduce the waste you send to landfill, we will propose a service where we manage your waste.

For each kilogram of waste that we remove from your waste stream, you will see a double benefit (reduction in landfill cost as well as an income from the recycling).

In other words, where other companies will profit from the removal of waste, we will profit from the reduction of waste, and you will save money.

Our main focus is reducing waste to landfill, thereby complying with environmental legislation.

“If we cannot save you money, we don't get involved.”

3. Electronic reporting

All waste is weighed and reported on our secure online platform. This data and more can be accessed with any computer and mobile device.

4. Carbon savings – diverting waste from landfill

The carbon savings presented on our reporting platform are calculated from the USEPA emission factors in their Waste Reduction Model (WARM). The resulting data are the combination of savings regarding using less energy for recycling material than to make an article from its raw materials, and the carbon saving from diverting the waste from landfill, where it decomposes.

“You cannot reduce anything until you measure it.”
