

Paperless Transactions Secure forms utilize URL Query String variables to be able to prefill most of the form elements via a link or form submission. These methods are detailed below.

Here is a list of the variables that can be prefilled using this method.

**Optional Query String parameters**

c1 custom field #1  
c2 custom field #2  
c3 custom field #3  
c4 custom field #4  
c5 custom field #5  
c6 custom field #6  
c7 custom field #7  
c8 custom field #8  
c9 custom field #9  
c10 custom field #10  
....continue to c30 – custom field #30  
a Amount  
r Recurring (true / false)  
f Frequency ( 52 / 24 / 12 / 4 / 1 )  
s Start Date ( any valid date, ie: 1 / 1 / 2010)  
e End Date ( any valid date, id: 5 / 1 / 2010)  
p Payment Method ( ach / cc )  
fn First Name  
ln Last Name  
sa Street Address  
ci City  
st State  
zi Zip

To begin prefilling you must place a question mark at the end of the page URL  
ex: <https://secure.paperlesstrans.com/SaveATree?>

After the question mark you can begin placing the variables and what you would like them filled in with always separating each variable with an ampersand (&).  
ex: <https://secure.paperlesstrans.com/SaveATree?fn=John&ln=Donor>

After loading, the page will repost and the link will appear in the address bar as normal  
(<https://secure.paperlesstrans.com/SaveATree>).

To use a form to prefill these you would put your Paperless page URL as the "action=". EX:

```
<form action="https://secure.paperlesstrans.com/SaveATree">  
First Name:<br>  
<input type="text" name="fn" value="" ><br>  
Last Name:<br>  
<input type="text" name="ln" value="">  
<br> <br>  
Amount:<br>  
<input type="text" name="a" value="">  
<br><br>  
<input type="submit" value="Submit">  
</form>
```

First Name:

Last Name:

Amount:

Submit
