

The Power to:

Increase efficiency and eliminate dual entry with integrations and interfaces.

Overview

We have partnered with a number of different vendors to create standardized interfaces for our customers. Sentact currently offers standard interfaces to CMMS, Building Management Applications, Inventory Systems, and many other back-office applications. An automated transfer of data means organizations can rest assured that all application business rules are being supported.

How Does It Work

Our integrations work seamlessly; we have the ability to receive 'push' alerts from your third party systems automatically generating a service request into Sentact. In some instances, we can provide a bi-directional interface closing the loop completely for your healthcare organization.

Out-of-the-Box Interfaces

- Seamless data transfer using a plug-in
- Select necessary data for transfer
- Real-time and accurate data transfer

Custom Interfaces

- Designed to your workflow
- Work together to determine specifications
- Real-time and accurate data transfer

Benefits of Integration

Increase Productivity

By sharing data between applications, management can make informed decisions; technicians can react more quickly, and allowing your organization to operate more efficiently.

Automate Processes

Eliminate the manual transfer of data between applications and automate that transfer allowing time for other activities.

Minimize Data Entry

Automatic data transfer of data means that duplicate data entry doesn't have to occur; improving accuracy.

Our fully integrated, cloud-based solutions are designed to optimize the efficiency and enhance the quality of the patient care environment across the continuum.
