## What should I know about your API?

### API access

To configure API access for your [dexi.io](#) account, you only need to create an API Key in your account settings. After having done that, continue to our [API documentation pages](#), found inside the dexi.io app (log-in required).

The screenshot shows the 'API Keys' section of the account settings. At the top, there are navigation tabs: 'Settings', 'API Keys', 'Subscription', and 'Payment history'. Below the tabs, there is a '+ API Keys' button. A text block explains that API Keys can be used to access the REST API and provides a link 'here'. Below this, a form for creating a new key is shown. It has a title 'Key #1' with a red close button. The 'Description' field contains 'My Integration Key' and has a placeholder 'Describe the purpose of the key.'. The 'ID' field contains '123412341234abcdabcdabcd' and has a copy icon. A note below the ID field says 'The key itself. Keep this secret.'. At the bottom of the form are 'Cancel' and 'Save' buttons.

### SDK's

We have the following SDK's available:

- [.NET](#)
- [Ruby](#)
- [PHP](#)

If you are interested in building an SDK not offered here. please contact us. We would love to discuss your project.

### Additional Information

Several videos discussing the dexi.io API are available here:
