NOTE: Do not tighten these four screws. They will be secured after calibration.

Original shaft collar shown - Alternate aluminum collar is also OK.

Tighten both hex screws. Turning knob should now allow for projector mount adjustment. Turn the knob to align the three Projector mounting holes with the three larger holes in the backplane before proceeding to the next step.

Locate the projector, SA07 and Projector control harness

Use the three SA07 screws to attach projector to slide mount as shown

Attach the Projector control harness to the Projector's RS-232 port, feed the cord under the mount.

After completing the PS Assembly, set it aside for use during the final assembly.
