© Fabio Perini - E - 05/10/16

MYLINE™ MYLINE is the right solution for converters looking for production lines running at the speed of 600 m/min at an attractive price. Fabio Perini has designed **2 complete versions** that guarantee versatility, efficiency and flexibility of the entire line.

MYLINE™ available in 2800 mm format, can attain product diameters up to 200 mm and cycle rates up to 40 logs/min.

MYLINE™ unites the high technological level of the "MILE" series rewinders, characterized by the "Sincro" transfer system, with the high safety and quality standards of Fabio Perini. The line is equipped with a versatile and accessible embosser that provides the capability of producing DESL, DECO and Tip to Tip products. The 409 mm steel rolls ensure high performance for any type of embossing. Through a command on the HMI panel both steel rolls can be replaced automatically from a warehouse that can store 4 additional rolls, thanks to the **Catalyst technology**. With the optional **A-ware**, each roll can be taken out from the warehouse while the line is running

The 3 line configurations include important solutions for flexibility and safety, such as the innovative line access system "Access 2.0" and other elements such as the double-perforation system on the rewriter and the grinding dust vacuum system on the log saw.

*Parent reel changeovers excluded. In a test condition lasting up to 8 hours without product changeover, with the line adjusted and operated by Fabio Perini technicians. The efficiency of each line will be exclusively set forth under the individual supply agreements and it may vary depending on the type of product being produced, the machine units included in the line and the quality and consistency of raw materials.
