

# GOVERNMENT INDUSTRY

123,000+ statewide employees | 13.7% of Illinois workforce | 6,963 local agencies

Government agencies have to transform into a modernized organization to maintain quality service delivery in a highly digitized world. In order to deliver public services as efficiently and effectively as possible, agency leaders like you must be agile in your processes, embrace new technologies for your operations and your workforce; all the while protecting your data from the ever-present threats of cyberattacks. Keeping the goal of advancing your mission in mind, by developing leaders at all levels of the organization and equipping your workforce with the tools to be successful with newly implemented technologies and processes will position your agency to better serve and relate to citizens.

## Competitive Futures

With trends like artificial intelligence coming to the forefront, you have to understand how and where to invest in applying cognitive technologies for the best impact on your mission. IMEC uses a world recognized standard for excellence which addresses the key critical business aspects of [leadership](#), [strategy](#), [customer engagement](#), [operations](#), [workforce](#) and [measurement & results](#).
