Simplify Scanning™

Universal Scanner Driver

Remote scanning with speeds up to 10x faster with a single universal virtual driver. With scanner redirection, Simplify Scanning removes the need to manage multiple devices in a remote desktop and hosted application environment.

- ● Citrix ● VMware
- ● Microsoft ● hybrid
- ● workstations

- ● HDX/ICA
- ● PCoIP
- ● RDP

Supports TWAIN or WIA drivers

Stop managing scanner drivers. Simplify Scanning removes the need to manage scanner drivers on the server-side, serving as a universal, virtual driver. Experience unmatched speed in remote scanning sessions, with TWAIN and WIA drivers supported for maximum compatibility.

Access complete scanner functionality with our virtual scanner driver. Manage scanners and users from one centralized, easy to use management console. Automatic updates and licenses are only managed over the server, rather than each client.

No more workarounds, just seamless scanning with superior client device recognition handled by the software automatically. Simplify Scanning works seamlessly with Tricerat's additional enterprise software for a full picture, robust solution that includes printing and user management.

Scanning speeds up to 10x faster than USB-redirected scanning for black and white, and speeds up to 4x faster for color. The universal driver provides increased application compatibility, reduced bandwidth consumption, and optimized transmission.

Return on Investment

Save time and increase productivity, with up to 10x faster scanning with a universal virtual scanner driver. Simplify Scanning allows quick ROI by eliminating instances of incompatible scanner drivers, unsupported drivers and applications, constant software upgrades, and time-consuming workarounds.
