ScrewDrivers®

Universal Print Driver

Unlike all other universal print drivers, ScrewDrivers eliminates the need to manage print drivers while still accessing a printer's full features and functionalities. It is a simple desktop print management solution that virtualizes print drivers from remote user workstations.

- Citrix ● VMware
- Microsoft ● hybrid
- workstations

- HDX/ICA ● PCoIP
- RDP ● 32-bit
- 64-bit

Supports:
- Windows
- macOS with Citrix

For over 20 years, ScrewDrivers has removed the hassle of managing print drivers in remote IT environments. Our universal print driver software eliminates the need for drivers on remote servers and allows users to print from any environment to any local printer.

ScrewDrivers is a brilliantly simple solution with plug and play installation and minimal configuration. The technology allows for access to advanced print settings such as PIN/secure print, stapling, collating, and duplex printing.

Improve operating stability by eliminating spooler crashes. Reduce load by removing unnecessary print drivers. Obtain faster print speeds through advanced compression. Get added security with encryption of print jobs going across the network.

Print to any available local client, with or without administrator intervention. All client updates are automatic with no input needed from the end user.

Return on Investment

See a return on investment by giving time back to IT departments to focus on higher-level issues. Eliminate user frustrations with failed or slow print jobs. Lower support costs by decreasing help desk calls and tickets. Boost your users' productivity with seamless printing, giving IT admins back hours they no longer have to spend on print-related issues.
