

# SAVE TIME WITH NUTRISLICE

DALLAS INDEPENDENT SCHOOL DISTRICT

Nutrislice menus are available on any mobile device.

## Integrated Digital Menus/Signage Solution Saves Time, Improves Accuracy For Large School District's Meal Program.

Dallas ISD uses Nutrislice to quickly publish school menus on their website and mobile app, and automatically reflect menu updates on signage throughout their schools.

### The Challenge

Each year, Dallas Independent School District serves 40 million meals to more than 150,000 students across more than 200 schools. The district had traditionally published each school menu as a PDF file on their website, then created separate image files to post their menus on digital signage. The menus and signage were often outdated because any food substitutions or special menu offerings would require manually updating and re-uploading both the PDF and image files. The district needed a more efficient solution — especially as its meal program evolved to include new menu offerings and more complex menu cycles.

“Nutrislice makes our life easier, and gives our parents and students the confidence that they will always have accurate information about our school meals. Using an integrated digital platform to seamlessly manage both menus and signage is a game changer for our program.”

### The Nutrislice Solution

Dallas ISD turned to Nutrislice for digital menus, and then added digital signage for an integrated solution that allows the district to:

- **Publish high-quality menus on the district's website and app** — with food ratings, surveys, notifications, nutrition details, and the ability to filter for allergen information — giving parents and students the tools and info they need to make informed meal choices.
- Quickly edit menus for ingredient substitutions and meal changes to ensure information is up to date — **saving the team more than six hours each month** and reducing the number of parent complaints due to outdated menu information.
- **Automatically reflect menu updates** on more than 400 signage screens in schools throughout the district to ensure signage accurately reflects current menus in each school.

### What's Next

The foodservice marketing team plans to use Nutrislice's advanced roles and permissions to give schools the ability to publish school announcements while maintaining central control of the other information on the screens.

Menus are automatically synced from the Nutrislice Menus website to the digital signage.
