What the Senior Cloud Consultant role is about:

As a **Senior Consultant,** you will be a key driver behind digital transformation initiatives for CrucialLogics customers by designing, building and overseeing many enterprise solutions. As a Microsoft Technology subject matter expert in the following technologies;

- On-premises and Azure Active Directory, Office 365 and Exchange, DLP, RMS &Intune, Mobile Device and App Management
- Microsoft Cloud Infrastructure Platform
- Microsoft Cloud Productivity Platforms

This **crucial role** within our Consulting Services will

- Be focused on Solution Design, Solution Architecture, and Project Delivery & Technical Leadership;
- Be responsible for end-to-end technical guidance, solution development and deployment expertise;
- Participate in pre-sales and solution development activities with the CrucialLogics Partners, including proposal development and presentation.

The role will provide you with an opportunity to;

- Use the leading Microsoft technologies
- Provide guidance and mentorship team of highly experienced consultants and technical advisors;
- Evangelize and educate customers on the latest development in cloud solutions, and demonstrate how they can support the business objectives of their organizations;
- Find future growth into other areas of the firm

What you will be doing / Your responsibilities will include:

- Become a trusted partner to our clients and become a trusted advisor
- Present at client workshops and seminars;
- Writing blogs and creating video blogs about the Microsoft technologies you are passionate about
- Learning new technology and keeping up with new technology trends
- Creating technology roadmaps and proposals for client projects;
- Presenting Microsoft Cloud-focused solutions and recommendations to Senior Leaders and Executives
- Liaising with cross-functional teams to build product & business requirements, collaboratively developing the best products possible;
- Maintaining leading-edge knowledge of relevant Microsoft technologies and best practices;
- Travelling required – approx. 50% and up

What we are looking for / Qualifications / Requirements:

- University degree or college diploma in Computer Sciences, IT, or related area of study;
- Microsoft certified, MCSE/MCITP
- At least 7 years of progressive project experience working in medium to large IT environments as a subject matter expert (SME) in Microsoft Infrastructure, Productivity and Security solutions, both on-premise and cloud-based
- At least 3 years' experience as systems operator in a Windows server technology environment (2008/2012/2016)
- Hands-on experience with one or more of the following:
- Active Directory design and operations
- Microsoft messaging, such as Exchange and Office 365
- Cloud infrastructure solutions, such as AWS or Azure IaaS, and Microsoft System Center
- Quest Migration Manager

The Benefits

- Healthcare coverage
- Flexible work program
- Training & Development plan
