Getting Started Guide

Apidaze Rest API

To view our Getting Started Guide in video format, please click here.

Why us?

Looking for a quick and simple way to embed customized communications to your TADHack application? You've come to the right place. Use Apidaze, our cloud-based platform to seamlessly embed the power of real-time communications (voice and messaging) to your applications.

Highlights

- 100% Language Agnostic: Build you app in any language and integrate with Apidaze.
- All you need is an external script. We can host it for you, or you can provide us the URL.
- Communicate with Apidaze in XML.

Best Practices

- Use Firefox or Edge as browsers for best results with WebRTC.
- If you choose to use 'Specify External Script URL', ensure that URL is accessible by Apidaze at a public HTTP URL.
- Your web server that serves the XML content of your External Script must set the Content-type HTTP header to text/xml.

Let's get started

Follow this three-step process to integrate your app to Apidaze

Step 1: Create Your Developer Account

 Click <u>Register</u> to create your developer account in the Apidaze Admin Console.

Register a new account	
Create a Password	
Please Re-Type Your New Password	
I Have Read and Accept the Terms of Service Protected by mCAPTCHA Process Terms	
Register Already have an account? Log in Now	

The default page after you log in (Console Dashboard), as shown below, is where you can get Developer Resources as well as all activities related to your Apidaze Admin Console Account.

Reseller Resources	Register	Account Settings	Change Password
• You are not subscribed to any of our reseller resources.		Billing Summary C	
Developer Resources	0	Users	Add User
Developer Name	NYRA		
Developer Status	Request to publish services Private		
Developer Apps	1	Support	Dashboard
Developer App DIDs	1		
		Packages & Pricing	

Step 2: Set Up the Webhook URL

• Navigate to the top right dropdown icon and select "Developer Services." This section allows you to create, delete, update, and search for your developer apps. When you start the workspace will be empty.

Dashboard				My Dashboard

When you click on the 'Create a Dev App' button on the left corner, as shown in the screenshot below:

apidaze					e natd~
My Decinooard > Apps Create a Dev App					
App Name 🛧	App ID	API Key	API Secret	Script URL	

you can create a new application which leads you to the screen below allowing you to choose between two ways of doing so:

A. XML Script:

- This option allows you to create an Apidaze developer application which will be hosted by Apidaze and contains simple static XML that your application can use to test parts of your application logic as you code it.
- XML Script is a quick and great way to create voice and messaging applications with minimal programming skills.
- This option will let you define a name of your application, select the region and the type of application (Voice or SMS).
- Use our Apidaze <u>XML Scripting Reference</u> and begin writing your script.

gion *	
East	•
	1

B. Specify External Script URL:

- This option allows you to create a developer application which will be hosted externally outside of Apidaze and contain the logic of your application to be executed upon receiving a call.
- All you need to do is send an XML response from your application to Apidaze's request instructing what to do with the call.
- This option will let you define a name, the type of application (Voice or SMS) and URL of your application hosted outside of Apidaze.

Create New App	Apidaze Account goku0650@hotmail.com - 1 app	•	×
App Name *		Region * US East	•
☑ Voice	ecify External Script URL		
Voice Script URL *			
		Create App	

Step 3: Code Your App

Code your application using a very simple set of XML instructions for call processing, or JavaScript for your WebRTC applications.

FAQ

Please find answers to some of the commonly asked questions to get up to speed quickly on our platform.

Ques: Where can I get my API key and secret?

The API key and secret are available on the main Developer Services Dashboard. You can hover over them and click to copy.

<u>My Da</u>	<u>shboard</u> > Apps				
	Create a Dev App				
	App Name 🛧	App ID	API Key	API Secret	Script URL
0	Test App	1625	c894f994	efba2ef7c3dfec514	4e98f3 https://backoffice.voipinnov
				efba2ef7c3dfec514	4e98f3d5c45bcd6c
				Click now to copy	

You can also click the three dots next to your app and choose "Edit." The API key and secret will be available in this "Edit Existing App" panel as well.

Edit Existing App	Account: goku0650@hotmail.com API Key: c894f994 API Secret: efba2ef7c3dfec514e98f3d5c45bcd6c	X
App Name * Test App	Region * US East	•
*You cannot change these settings on an existing app You can use the "Copy" function from the apps menu t ✓ Voice □ SMS □ Allow SIP Header Mod	to create a new app using this app as the template.	
For Voice Calls: Edit Script XML O Specify Exter Voice Script XML* <document> <work> Test </work> </document>	rnal Script URL	
		<i>//</i>
	Update App	

Ques: When do I need to purchase a number?

If you're building something that includes SMS for example, you'll need a phone number for your app to work.

Ques: How do I assign a number to my application?

- Navigate to the top right dropdown icon and select "Developer Services."
- Click the three dots next to your app and choose "Assign Numbers."

• Select "Purchase Number" as you will not see any numbers listed here yet.

Number	Country	City - State/Region	Assigned To	
Search			Items per page: 10 🔻	1-8 of 8 (<()

• Apply your search filters to find the number you want to purchase. Once you found the number, check it off, and hit "Order Selected."
