

Tom Mills serves as the Lead Systems Engineer in CBP's Office of Information and Technology. In this capacity, Mr. Mills serves as a technical expert on a wide range of data center, network and application technologies, advising leadership and staff on running one of the largest and most diverse information technology platforms in the federal government. He has over 20 years of experience leading and managing challenging and innovative technical programs and projects. He brings a unique perspective to CBP OIT, having personally directed Information Technology (IT) projects for the Federal government from differing viewpoints. He has successfully served as a:

- Government executive overseeing and presiding over three separate high visibility DHS level 1 programs that had oversight from the highest levels of government to include the White House, Congress, the Department of Homeland Security and private industry;
- Program manager and software application developer/systems integrator delivering high value software for several different Federal government agencies; and,
- Subject matter expert and system engineer in an acquisition, system engineering, and IT systems development oversight role working for a Federally Funded Research and Development Center.

Mr. Mills is a graduate of the U.S. Naval Academy and is a Certified Scrum Master.
