

WHY VMWARE FOR STATE AND LOCAL GOVERNMENT?

Growing demand from constituents and employees for anytime, anywhere services coupled with increasing cyberthreats is driving change across state and local governments. These challenges are elevating the need for modern technologies that improve workforce productivity, security postures, overall efficiency. A trusted advisor to state and local agencies, VMware delivers groundbreaking software solutions that help simplify the operation and management of IT.

VMware is a Proven IT Leader in Government IT

VMware has focused on reducing IT complexity for nearly two decades. The server virtualization pioneer has gone beyond compute to virtualize networking, security, and storage, delivering recognized enterprise cloud infrastructure and digital workspace products. Today, VMware provides a portfolio of government-ready technology solutions that meet expanding agency demands in the mobile-cloud era:

- **Bulletproof security** that fortifies agencies from the inside, creating more resilient infrastructure
- **Transformative technology** that provides game-changing efficiency with the agility to quickly scale innovative cloud initiatives
- **Seamless mobility** that empowers workforces, redefining accessibility and productivity

Bulletproof Security Safeguards Sensitive Data

VMware solutions enable finer control over virtualized networks and safeguard against operating system-related vulnerabilities, providing a more resilient infrastructure for state and local agencies experiencing increasing cyberattacks and malware threats. Zero-trust, policy-based, micro-segmentation creates compartmentalized security that keeps workloads secure from one another within the virtual data center, preventing the lateral spread of threats if agency perimeter defenses are breached.

With a single, comprehensive framework for securing virtual data centers and cloud environments at all levels—host, network, application, data, and endpoint—VMware solutions enable state and local agencies to centralize control over IT assets and strengthen compliance positions.

LEARN HOW YOUR AGENCY CAN BENEFIT FROM VMWARE SOLUTIONS

VMware empowers state and local agencies with a range of software-defined data center and end-user computing solutions. From VMware NSX® for virtual networking and VMware vCloud® Air™ for hybrid cloud computing to VMware Workspace One™. VMware solutions help state and local agencies achieve their mission goals by improving workforce productivity and data protection while relieving IT burdens and lowering costs. Visit VMware online at www.vmware.com/go/state-local to learn how your agency can benefit.

Transformative Technology Accelerates IT Agility

With VMware solutions, state and local agencies can improve application availability and performance while maximizing IT investments by lengthening the useful life of existing IT infrastructure, reducing manual processes, and automating provisioning. Agencies can prevent application recoding and move to the cloud faster with VMware. They can also reduce time spent on routine administrative tasks because VMware solutions lower both IT capital and operational costs. VMware's extensive ecosystem of government-focused systems integrators and solution provider partners ensure applications are optimized for delivery.

A suite of VMware solutions helped Montgomery County, Pennsylvania improve worker connectivity and mobility, increasing worker efficiency and productivity by up to 300 percent while reducing mileage and overtime costs and simplifying IT management.

Seamless Mobility Redefines Accessibility and Productivity

Mobility is no longer an option for state and local agencies; it is a requirement. Mobile solutions are empowering field-based workers from first responders to inspectors to case workers. VMware solutions eliminate the trade-off between enabling on-the-go productivity and maintaining IT control by providing one-touch access to any application on any device together with the policy-driven automation that keep personal and agency-owned devices secure. With VMware solutions, state and local agencies can also strengthen continuity of operations plans.

VMware solutions reduce IT costs and hassles to deploy, configure, secure, track, manage, and support applications across devices so users have the access they need, when they need it—even to the most sensitive information. VMware solutions also unify end-point management as well as provide real-time device details and continuous compliance monitoring. State and local agencies can attack mobile threats head on—safeguarding devices, containerizing content, sandboxing emails, and more. VMware solutions enable agencies to embrace mobility without sacrificing security.
