

- Waterborne feeding of cleaner fish
- Continuous feeding in all pens
- A cost- and energy-effective solution

Centralfeeder

feedGOOD

A waterborne central feeder that ensures safe feeding of cleaner fish. Avoid feed spill with continuous feeding in all pens.

Centralfeeder offers parallel feeding of cleaner fish in all pens. Feed amount and up to 4 time intervals per day are controlled from a pc.

The feeder can feed up to 10 pens simultaneously - with up to 3 distribution points per pen. Waterborne feeding at desired depth - where the fish is located - will avoid the impact of wind and surface currents.

Waterborne Feeding is considerably gentler on both the pellets and the feeding pipe, and noise and micro-plastic discharge are reduced to an absolute minimum. You will also experience a significant drop in energy consumption by replacing air with water. In addition, new feed pipes will be cheaper as you don't need to purchase antistatic pipes.

Centralfeeder is part of the feedGOOD portfolio - OK Marine's products in the cleaner fish feed segment.

AKVA GROUP™

SPECIFICATIONS

L/W/H:	1600 / 1220 / 1310 mm
Dry weight:	800 kg
Silo capacity:	1000 liter
Power supply:	32a / 400v / 50 hz / 3 phase
Dosing capacity:	10 x 0-50 kg/hour
Pump pressure:	Max. 3.5 bar
Pump flow:	Max. 80 liter/min
Options:	Cloud based HMI, insulation, flowmeters, pressure sensors
