FISHTALK FEEDING INSIGHT

Collects data and provide essential decision support for full feeding control.

Feeding Insight is a tool for analysis and verification of the feeding strategy based on environmental data, sensor data and feed data. The module collects important data that was previously dispersed and provides the feed manager with valuable insights and several useful tools:

- Collects previously hidden data and provides insight in the activity at feed centrals
- Discover feed deviations
- Insight in growth and development from start to finish
- Presentation of sensors on equipment that provides a basis for adjustment in feeding
- Control feed consistency and feed patterns
- Overview of pens and locations in area of responsibility
- Lots of data and high performance allow for quick data retrieval from any time period
- A discussion basis for planning and strategy meetings with colleagues and managers

Feeding Insight is a module for Fishtalk Control. Please contact us for more information about the product.
