

Supply and Demand of Warmwater Prawns

WHAT HAPPENED?

High occurrence of **disease** and lower **production** of **Indian prawn** caused **prices** to **rise** considerably between **July-October 2019**.

WHY IS IT IMPORTANT?

WHAT COULD IT MEAN?

Greater output from major exporters such as **Indonesia**, **Vietnam** and **Ecuador** is likely to **outweigh** lower production in **India** causing **demand** to shift.

The **average price** is likely to **drop by up to 5%** in the **next three months**.

Watch out!

As the **largest prawn producer**, India could still have a significant impact on **global markets**.
