

Discover best-in-class audio conferencing service that allows you to have more natural and productive meetings with colleagues, customers and suppliers.

## Sounds and feels like a face-to-face meeting.

With CommuniCloud MeetMe with Dolby Voice, your meeting attendees truly feel as if they're in the same room — whether they're working from home, the office or on the move. This means you can engage more naturally in a dynamic conversation that helps you speed up the decision-making process. To do this, CommuniCloud MeetMe with Dolby Voice gives you:

- **High-quality sound:** combining high-definition audio with background noise reduction and audio levelling for each participant
- **Voice separation:** participant voices appear to come from different directions (just like being around the meeting room table).

## Make every meeting easier.

- Workshops or planning sessions where you need active participation from everyone involved (and not just listening).
- Executive meetings where you need a fully engaged audience making the right decisions.
- Project management with a broad range of individuals working together to approach a problem from different perspectives.

## More natural, more effective.

Using CommuniCloud MeetMe with Dolby Voice, your meetings become easier and more productive.

- Understand who's talking, and what they're saying — so more time can be spent focusing on the things that matter.
- Identify when other people are trying to join the conversation or break in, so everyone can participate more easily.
- Understand what's said even if more than one person talks at the same time, so the conversation can flow naturally.
- Run meetings with global teams when English may not be everyone's first language and accents cause confusion.

## The complete solution.

Wherever you join from, your meetings maintain a natural flow of conversation that makes each conference as good as being there in person. Your participants can connect via:

- The internet, giving them high-quality sound and voice separation
- Traditional fixed or mobile phone lines, using local dial-in numbers for over 50 countries
- The innovative Dolby® Conference Phone, which connects you to a meeting room — giving you high quality sound and voice separation, while improving audio quality in the room itself.

## User feedback

The overall experience of the audio call was excellent. A+.

The stereo (voice separation) solution is great, much better than normal calls.

## The complete solution

Connecting via the internet (VoIP) enables High Quality Sound and Voice Separation.

Standard audio is enabled when you connect over traditional fixed line telephone/mobile phone (PSTN) with local dial-in numbers for over 50 countries.

The innovative Dolby® Conference Phone allows users to connect to a meeting room remotely to experience high quality sound and voice separation from all participants in the room, as well as improving the audio quality in the room itself.

So, wherever you are joining from, your meetings maintain the natural flow of conversation that makes audio conferences as good as being there..

## Why CommuniCloud?

- Our services are delivered 100% of the time by CommuniCloud agents, focused on the end user.
- We are completely vendor agnostic – we are motivated to design solutions that will work best for your environment. We will not push one technology or partner, instead we will work with you to evaluate what tools will suit your needs, now, and into the future.
- CommuniCloud manages all aspects of your collaboration technology with dedicated resources. Providing a single point of accountability that avoids inefficient vendor management and a lack of accountability.
