

Enabling a global EWM solution

Warehouse optimisation and automation are no longer visions for the future, businesses are embracing this technology now. However, it's not just about moving goods from A to B, you need to integrate these systems with human resources, equipment assets and customer data. In today's hyper competitive, online environment, heightened consumer demand is bringing pressure to deliver faster while operating much more cost effectively.

SAP Extended Warehouse Management helps you meet these objectives, increase visibility and drive innovation.

Why move to EWM

The SAP EWM framework offers a wealth of functionality beyond core warehouse management, which includes: task prioritization and optimization, resource management, transport management, stock optimization and machine integration to support complex warehouse operations. The capability of SAP EWM has enabled customers to move beyond simply managing stock, to optimization of operational processes. This step change in capability can only be achieved with EWM. This change of perspective brings three key reasons to move:

1

Reduce your operating costs through warehouse automation: increased efficiency, greater stock accuracy and faster pick cycles

2

EWM gives the capability to handle larger, complex volumes of data at a faster pace, with the ability to utilise simulation and predictive analytics

3

Current SAP ECC WMS will not be developed or enhanced beyond its existing capabilities. EWM is the strategic solution for S/4HANA.

Driving value from innovation

EWM provides a platform for innovation, driving automation through emerging technologies. The integration with SAP Leonardo offers a world of possibilities for taking warehouse operations to the next level. SAP only plans to build these innovations for EWM, not WM.

As a member of the Partner Advisory Council for Innovation, delaware are driving digital transformation projects with emerging technologies. We promote customer co-innovation through the del20 project, enabling development of in-house technical skills and helping clients overcome their most significant challenges.

Real-time truck planning and Automated Yard Management

Geo Positioning and travel distance calculation via connected forklifts

Workload prediction for warehouse tasks using machine learning

AI

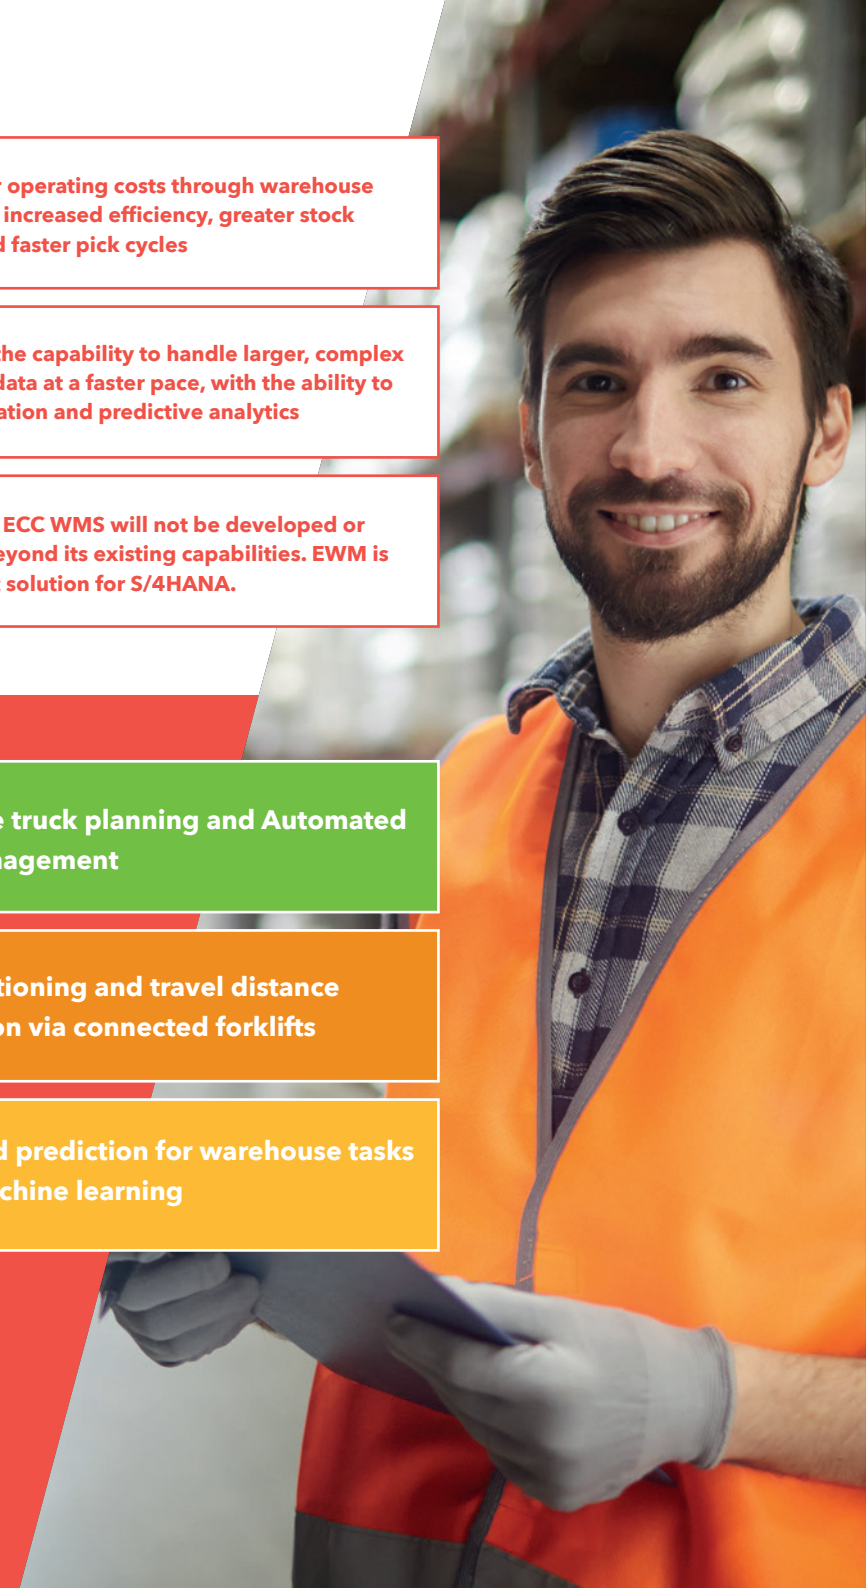

RPA

IoT

Blockchain

Why delaware?

delaware is a full-service global technology partner with a focus on SAP and complementary technologies. We focus on the long term; many of our client relationships extend beyond 15 years. As a truly global business, we are one of SAP's go-to SAP S/4HANA partners, have referencable clients in over 20 industries and are a development partner for S/4HANA Cloud EWM. As a winner of two SAP Pinnacle Awards in 2019, delaware has been recognised by SAP for its outstanding contributions, dedication to teamwork, and ability to challenge what is possible to help customers achieve their goals.

SAP Pinnacle Awards 2019

- ISV Partner of the Year - SAP S/4HANA Cloud
- General Business Cloud Partner of the Year

The delaware global deployment model

delaware operates a global delivery network in which build and deployment activities are delivered by our SAP EWM skilled resources across 11 international locations. Our customer partnership delivery model ensures the optimal use of our skilled global EWM capabilities, while rapidly upskilling and training customer project and local business resources to support both their national and international warehouse deployments.

The FAST EWM Template

FAST EWM is a preconfigured template solution supporting best-practice warehouse processes with built-in content, tools and methodologies. FAST EWM offers 'out-of-the-box' flexibility, combined with the power of SAP's world-class business solutions. FAST EWM is a scalable solution for midsize to large national and international companies across multiple industry sectors.

SAP EWM business value

Agile order fulfillment

48% lower customer order cycle time

Effective cost management

34% Ongoing labour cost reduction

Improved employee efficiency

30% increase of worker productivity
