

LOW COST & QUICK ACCESS HYPERION 11.2 DEVELOPMENT ENVIRONMENT

Are you interested in upgrading your current on-prem Hyperion release to v11.2.x and don't have the time or budget to set up an environment to test yourselves? inlumi is pleased to be able to offer our customers with low cost cloud-based development environments to evaluate the new features and functions of 11.2.x.

These are pre-installed and easily accessible over a secure internet connection without any network complexities to get you up and running straight away. We can also provide you with help to regression test your own Hyperion application(s) by securely migrating and upgrading them in this development environment. This will allow you to make your own assessment without impact to your own production systems and at your own convenience.

Contact inlumi (info@inlumi.com) if you would like to discuss this exciting opportunity to get hands on with 11.2.x. We are always happy to chat about our experiences with this version in general.
