

Paramont Upgrade Process, v1.0.3 to v1.0.4

The Paramont upgrade process must be performed at the DVR/NVR itself, it cannot be done from the web. Please follow the steps below to successfully upgrade your DVR/NVR.

- Please download the appropriate file for the corresponding model off the website, www.invidtech.com/paramontfirmware
- Once the file is downloaded, copy and paste all files to a USB. When pasting the files to the USB they should NOT be in a folder.

- The USB you use does not have to be empty but any files on the USB MUST be contained in a folder. If the files are not in a folder the DVR/NVR may try to install one of those files.
- Power down the DVR/NVR
- Plug in the USB stick to the front panel USB of the DVR/NVR
- Power On the DVR/NVR, and wait around 2-4 minutes for the flash to upgrade
- DVR/NVR will boot up and check to make sure it took firmware, v1.0.4.....

Firmware Version
1.0.4.0R2.B61213L.0.D002.U1(16A2)
