NORTHERN TECH *Awards* 2019

**TOP 100 FASTEST GROWING
TECHNOLOGY COMPANIES**
in the North

28 MARCH 2019 / ALBERT HALL / MANCHESTER

A WELCOME MESSAGE

from

HUGH CAMPBELL

Managing Partner, GP Bullhound

A very warm welcome to the Northern Tech Awards 2019. Thank you for joining us in Manchester this evening as we return to the city that hosted the very first event ceremony five years ago.

It has been another positive year for Northern tech, as the wider world increasingly wakes up to the blend of talent and innovation we have in this diverse and tenacious region. We have seen significant funding rounds and huge acquisitions, and some of the North's biggest names have continued to grow as they go from strength to strength.

Our host city tonight is currently enjoying a surge in tech activity. Big-name corporations are moving into Manchester, homegrown successes are developing nicely, and there's a fertile start-up scene providing great potential for the future.

While the specifics vary from city to city, the overall story of Northern tech is one of increasing confidence, growth, and success.

However, even the most optimistic analyst would concede that there are challenging times on the horizon. Depending on who you ask, this will either be a major problem for tech in the UK, or a just a minor blip and an opportunity to be seized.

Whatever happens to the economy though, such times are an opportunity for us as individuals in the sector to think about why we do what we do. Technology will continue to change the world regardless of what else is happening. If being part of that is in our DNA, we'll have the strength to ride out any bad times while building positively towards more good times.

I would like to thank all the companies that applied for tonight's awards. Regardless of who wins, the high quality and quantity of the entrants reflects a thriving technology sector across the North, and for that you should all be proud.

Tonight we will unveil the 100 fastest growing companies of the year. Our esteemed judges have had a difficult job picking seven of these companies to win special awards, including the Overall Judges' Award, recognising the company with the highest achievements for growth, innovation, international success, and leadership.

Our charity tonight is Founders4Schools. Its mission is to inspire students and prepare them for the rapidly changing world of work. It does this by facilitating encounters between business leaders and students across the UK. The Founders4Schools team does important work, and I hope you'll support them. You will find their QR Code within this brochure and also on your table, so please give generously.

I would like to thank our sponsors tonight for helping to make this not-for-profit event possible. Some are newcomers and some are returning to support us again; they are all very much appreciated: Barclays; ECI; Squire Patton Boggs; Mobica; OBI;

Pareto Law; Aquiline; Berenberg; Frazer John Recruitment; Inflexion; London Stock Exchange, and Mercia Technologies.

Finally, a sincere thank you to our media partners Sevehnills and Insider Media. Their work in marketing and covering tonight's event is a crucial factor in its success. I would also like to thank Missile Digital for the film and Draw & Code for their animation work.

Aside from the awards that will be handed out, the great value of tonight's event is bringing you all together in the same room. It is rare that such an esteemed and accomplished group have the opportunity to spend time together. Please make the most of it and connect with new people. The fresh perspectives we leave with tonight will help us all embrace new ideas and opportunities, whatever the future holds.

Hugh Campbell

Top 100 RANKING

RANK #	COMPANY NAME	HQ LOCATION	SECTOR	GROWTH RATE %*	COMPANY PROFILE
1	Wejo	Chester	Software	128.2%	Wejo is a leading connected vehicle data marketplace.

GP BULLHOUND

Technology Predictions 2019

Technology's transformative effect has touched every corner of today's world. Its commercial, social and political impact has been unprecedented.

At GP Bullhound we are proud to work with the entrepreneurs and the world-leading companies that appreciate technology's potential – and work hard to turn its promise into reality.

Now entering its twelfth year, our Technology Predictions report reflects our optimistic mindset and demonstrates what technology and its leading minds could achieve over the next 12 months.

It has been a year of trials and tribulations for technology as regulators have sought to match its evolution with existing frameworks; yet our report shows that technology does not just move the goalposts, it reshapes the world as we know it. How we bank, shop and the type of money we carry are all covered.

We have identified four of our global trends which particularly relate to the North.

To view the full report, please visit: www.gpbullhound.com/en/research/

DIGITAL BANKING

Continues to Rise

Between 2017 and 2018 there was a 24% increase in digital transactions, with more than two-thirds of millennials in the US using their smartphone as a wallet. This is creating an environment where traditional financial institutions are implementing innovative digital banking solutions, while start-ups grow at a rapid rate due to the demand from venture capitalists to invest in fintech.

RETAIL TECHNOLOGY

Gets Smarter

Traditional bricks and mortar retail still dominates over e-commerce, making up 88% of global retail purchases. Tech giants and online start-ups are even turning their attention to physical rather than online exclusive retail. A new age of retail is emerging, with the combination of innovative technology and the social dimension consumers enjoy in traditional retail.

EMPLOYEE ENGAGEMENT

Goes High Tech

Recruitment processes, data analytics and capital management are just three areas of HR set to be disrupted by new technology. HR tech could have a major impact on the way teams manage their internal processes, but artificial intelligence used in HR will have to be tuneable in order to avoid institutionalizing the biases it aims to eliminate.

ARTIFICIAL INTELLIGENCE

Is The End of Repetition, not the End of Life

The media narrative has often portrayed technology as the end of the white-collar workforce, but like all previous industrial revolutions, humans will adapt to new technologies. Artificial intelligence is set to improve working conditions, create more flexible ways of working, and remove the need for humans to take on time-consuming menial tasks.
