

Go Asset Management provides real-time, secure access to asset data so that users can create and update asset information in the field such as replacement parts, photos, and notes. It also allows users to perform location verification, meter readings, and inspections.

Your Challenges

- Incomplete or imprecise asset profiles, hierarchies, and ownership make work management difficult or inexact
- Unknown or inaccurate lists of asset replacement parts lead to multiple trips and wasted time
- Employee or location-based asset inventories are cumbersome and inconvenient, leading to delays and incomplete information
- Location and asset inspections (e.g., room, custodial, and life safety) are recorded manually and at a later time which is cumbersome and leads them to be past due or incorrect

What's in it for you?

- Direct access to the asset profile via the purpose built mobile application allows users to create and update asset information in the field in real time
- Update the replacement parts list for an asset using an iOS device for accurate quantities and part numbers
- Integrated barcode scanning allows users to perform quick and accurate asset inventories. This could be all of the assets assigned to a location or assets assigned to an employee.
- New inspection functionality helps users to quickly and easily inspect locations or assets. Users can then enter a rating, link photographs, and log remedial actions from their IOS device.

Go Asset Management

As part of a broader Integrated Workplace Management System (IWMS), Go Asset Management is seamlessly integrated with an extensive range of facilities management tools under a single, unified software platform.

The five pillars of AiM IWMS:

- Real Estate and Property Management
- Space Management
- Operations and Maintenance
- Capital Planning and Project Management
- Energy Management
