

Corl Partners with Polymath to Bring Revenue-Sharing to the Blockchain

Toronto, Canada – December 21, 2017 – Corl Financial Technologies Inc. (“Corl”), creating the world’s first regulatory-compliant securities and revenue-sharing token, today announced that it has partnered with Polymath, the world’s leading securities tokens platform, to facilitate the launch of their token.

Corl, the company pioneering the concept of revenue-sharing on the blockchain, has formed a partnership with Polymath to facilitate the launch of their securities token. Polymath provides the platform and infrastructure for launching AML/KYC compliant securities token and has developed the technology that ensures that regulation is legally enforced on the blockchain. Through this partnership, Corl will be able to issue their securities token and ensure compliance with regulatory requirements.

CEO of Corl, Sam Kawtharani said, “Leveraging blockchain technology is a logical next step for the securities industry, which enhances the investor experience and helps facilitate compliance with regulatory requirements. We are excited to work with the talented team at Polymath, who share our same vision of the future.”

CEO of Polymath, Trevor Koverko, added, “For the first time in history, security tokens will represent shares in traditional financial assets and investment vehicles. These assets and investment vehicles function better as tokens because people want faster, cheaper 24/7 trading functionality. Using the Polymath platform, security tokens such as Corl will bring levels of efficiency to the financial markets like never before.”

Corl provides royalty financing to emerging technology companies, whereby companies receive funding in exchange for a portion of their monthly revenue. The Corl token (CRL) is the world’s first token to represent equity in a company, thus providing token owners with exposure to the growth of Corl and its portfolio companies. CRL token owners are also eligible for a dividend equal to 10% of net profits, paid out as Ether cryptocurrency on a quarterly basis.

CIO of Corl, Derek Manuge, said, “Investors will be able to invest in a digital token that has value beyond its utility. At Corl, we are proud to be leading this movement by offering 100% of the equity in our company as a digital token on the blockchain.”

Corl will be working with Polymath on the development of the Corl token which is scheduled to launch March 1st, 2018.

About Corl Financial Technologies Inc.:

Corl aims to empower entrepreneurs and investors through the use of technology and innovative funding strategies based on revenue. Unlike traditional debt or equity financing, Corl

provides revenue-based financing to high-potential early-revenue companies, streamlining the funding process. Corl also aims to launch the world's first regulatory-compliant securities token, representing 100% of the equity in the company, and paying out quarterly dividends of in Ether. With Corl, companies can grow on their own terms without any dilution, while providing investors with the opportunity to participate in an equity token that generates a continuous quarterly yield.

About Polymath Inc.:

Polymath aims to be the industry first security token launch pad and disrupt the multi-trillion dollar securities industry by creating an open platform that gives global businesses access to the blockchain, smart contracts and token creation technology. Polymath will make security tokens available to investors in a fully compliant and regulated manner. The platform will serve as a launch pad for companies looking to create and issue securities tokens by automating the complex legal and technical functions of a token sale. Polymath aims to do for securities tokens what Ethereum did for application tokens. Polymath's mission is to become the open-source standard for launching AML/KYC compliant securities tokens.
