### CRASH TEST RATING

#### NHTSA CRASH TEST RESULTS:

##### Frontal crash ratings:

Driver: \*\*\*\*\* Passenger: \*\*\*\*\*

##### Side crash ratings:

Driver: Not Rated Rear Passenger: Not Rated

Results based on a 35 MPH frontal crash and 38.5 MPH side crash. Results are reported in a range of one to five stars, with five stars indicating the best crash protection for vehicles within the same weight class. This test used driver and passenger belts and airbags.

#### NHTSA ROLLOVER RESISTANCE RATING: \*\*\*

The Rollover Resistance Rating is an estimate of your risk of rolling over if you have a single vehicle crash. It does not predict the likelihood of that crash. The Rollover Resistance Rating utilizes a "fishhook" maneuver which is a series of abrupt turns at varying speeds to see how "top-heavy" a vehicle is. The more "top-heavy" the vehicle, the more likely it is to roll over. The lowest rated vehicles (1-star) are at least four times more likely to roll over than the highest rated vehicles (5-stars).
