

Improve Outcomes Through Clinical Process Measurement

Implement Highly Reliable Healthcare

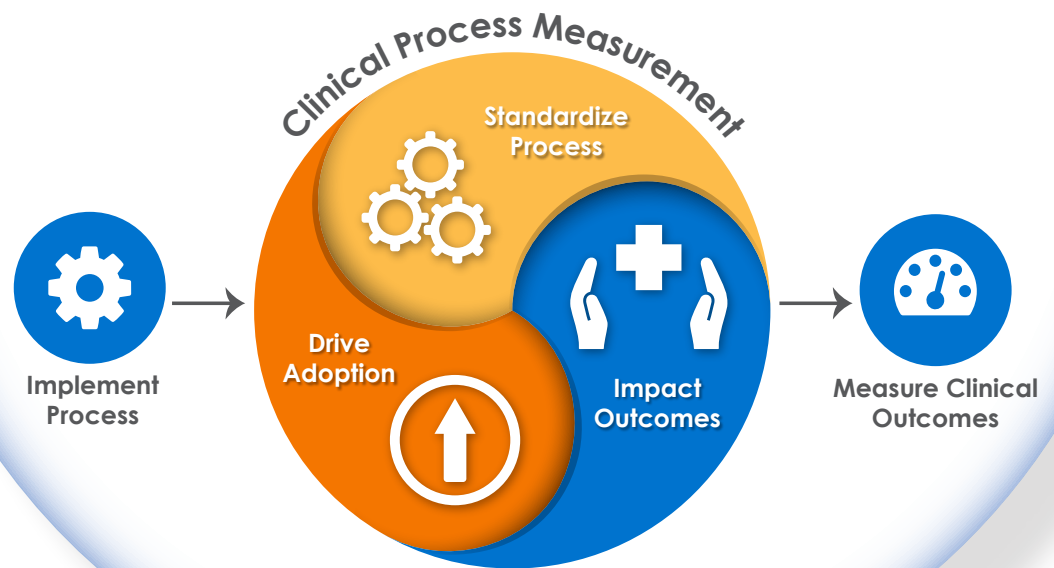

LogicStream Health offers Clinical Process Measurement solutions that allow health systems to improve their clinical outcomes and clinician satisfaction with their EHR. While the process for care improvement is iterative, it starts with clinical knowledge management and optimization of clinical content. In order to ensure sustainable and effective quality improvement initiatives over time and across a health system, the process cannot end there.

The reality is health systems today are constantly chasing the project of the hour to deliver high-value care. Changes are implemented and a wait and hope approach is taken. Today, health systems rely on outcomes to measure clinical process. In reality to measure clinical process effectiveness, they need to measure process and adoption and tie that directly to outcomes.

Before LogicStream

With LogicStream

Clinical Process Measurement Solutions

STANDARDIZE PROCESS
Effective management of content to support clinical process

DRIVE ADOPTION
Self-service measurement allowing operational stakeholders to identify and eliminate unnecessary variation in care

IMPROVE OUTCOMES
Understand the impact clinical processes have on outcomes for highly reliable healthcare

The LogicStream difference is an ability to accurately measure the adoption of accepted best practices and tie standardized care delivery to clinical outcomes. The platform also provides real-time, self-service access for clinical stakeholders to track and drive high adoption. This is scalable and sustainable quality improvement that results in delivering highly reliable healthcare throughout an entire health system.

LogicStream allows you to understand the impact your clinical process and EHR build have on care delivery. By reducing care variation, health systems are able to deliver better outcomes at scale. Health systems that have implemented Clinical Process Measurement have seen results like a **32% reduction** in readmission rates in their cirrhotic population, a **30% reduction** in CAUTI rates in the first 90 days and an **88% reduction** in blood clots.

LogicStream delivers Clinical Process Measurement solutions that allow health systems to achieve highly reliable healthcare:

- Organize, manage and optimize clinical content
- Measure adoption of the accepted and implemented, evidence-based best practices
- Highlight and eliminate unnecessary care variation for improved outcomes
- Make accurate, data-driven adjustments to improve workflow and compliance
- Understand the impact clinical process compliance has on outcomes
- Improve physician and patient satisfaction
- Drive improved outcomes around key quality and compliance initiatives at an enterprise level

About LogicStream Health

LogicStream Health is trusted by all types of healthcare providers across the United States. We are dedicated to helping health systems fully leverage their clinical quality improvement efforts and investment in EHR technology to improve the lives of the patients they serve and the caregivers they employ. The LogicStream Solution is designed to assist in the analysis, evaluation and management of a hospital or health system's clinical processes and standardization efforts.
