The Purchasing Guide for Electrical Contractors

www.epsmag.net

Each year we choose what we believe are **Top Products** in the Electrical Industry market. This year is no different. The products and services chosen are each unique, beneficial and reliable in their own right. Having the ability to choose the tools and services that best fits your job description and your work style is what it's all about. We hope you agree with our choices.

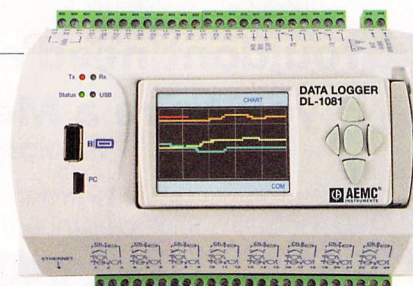

AEMC® Introduces the NEW 8-Channel Data Loggers Models DL-1080 & DL-1081

The DL-1080 (no display) and DL-1081 (with display) loggers are versatile, powerful and cost effective data loggers handling analog, digital and other types of variables with high resolution and speed. They offer high performance and are easy to configure and operate.

They have eight configurable analog inputs that can read thermocouples, Pt100, Pt1000, DC voltage and DC current signals. The DL-1080 and DL-1081 have two relay outputs and eight digital ports individually configurable as inputs or outputs. Up to 128 math channels can be used to perform operations on the measured values. Up to 32 alarm events can be detected, allowing output activations, e-mails and SNMP trap sending.

The Model DL-1081 incorporates a color display that can be attached or remotely installed for local indication or configuration. A user friendly configuration software program is included and can be accessed by Ethernet, USB or RS485 and also provides means for online monitoring, logged data downloading, printing and exporting to spread sheets and other formats.

CE Inputs Rated CAT II

AllSun Tracker Pallet System

The AllSun Tracker self-contained pallet system, released this year, allows for simplified shipping of the solar electric dual-axis tracker directly to the installer or job site. Designed utilizing the rails of the tracker's frame, the pallet and AllSun Tracker vastly simplifies supply chain management and installation by including the entire tracker and materials needed for a complete installation, reducing procurement time and the cost of sourcing of materials. The fully pre-engineered system can be equipped with 20 or 24 panels and is shipped, free the same day it is ordered. Each tracker includes GPS and wireless technology to precisely follow the sun maximizing production and includes free lifetime monitoring. Designed for projects large and small, the AllSun Tracker has been used for residential installations to 2.1MW farms. AllSun Trackers are designed and manufactured in America.

BMP®41 Label Printer

The Brady BMP®41 Portable Label Printer is an exciting new tool for electrical labeling. It has an ultra-rugged, portable design and an impressive variety of industry-specified material options, including both die-cut and continuous labels up to 1" wide. It gives you the versatility to create wire markers, sleeves, patch panel labels, terminal block labels and general ID labels – all with a single portable printer!

But it gets even better. The BMP®41 printer has several new features to help you get your labeling jobs done right the first time, so you can save time and money by only printing your labels once. It has built-in templates for common label types, all-in-one cartridge systems that automatically set up your label, and an easy-to-use, ergonomic design with LCD screen and QWERTY style keypad. It's the ultimate tool for on-to-go electrical labeling!
