The New and Improved Audit

Conduct asset audits with greater precision in less time with new features designed to simplify the process and ramp up efficiency.

Enhanced Accuracy with Expanded Options

The new Audit Tool acts as a control panel that enables you to define audit details in 3 easy steps. This new process will set the foundation for clearer and more accurate reporting.

The screenshot shows the 'Create a New Audit' workflow in the Asset Panda application. It includes a sidebar with a list of existing audits, a main form for defining audit details (name, method, dates, and recurrence), and a summary screen on a mobile device showing audit configuration.

Eliminate Redundancy with an “Item Burndown List”

A powerful new addition to the Audit interface, the Item Burndown List takes the guesswork out of the scanning process and displays progress in real time. A status field displays completed and uncompleted items while a new pop up prompt prevents users from double scanning an item.

The screenshot displays the 'Audit Progress Details' for audit 1588023625. It features a table of assets with their scan status and a mobile phone overlay showing a burndown chart and progress indicators.

DESCRIPTION	APID	DESCRIPTION	DATE AUDITED	AUDITED BY	STATUS (10/130)
iPhone XR Grey	75	iPhone XR Grey	2/27/2020	-	SCANNED

Establish Accountability by Assigning Audits to Individual Users

Admins now have the ability to assign audits to individual users so they can only make changes to the audits assigned to them. See who audited what and where and improve accountability throughout the process.

Audit Details Group Details **Assign Audit**

Individual Audit

Each user has to finish their part of the audit.

If Individual Audit is enabled, each user will see restricted audit list based on their user permissions. The audit will be finished when all users finish their portion of the audit.
