# Junction Hollow Surveys

# Station 1: Entrance from Boundary St.

How might the entrance at Boundary St. feel more park-like, more welcoming?

How might you connect from surrounding neighborhoods to the Junction Hollow valley?

# Station 3: Along Junction Hollow trail

How do you want to interact with water?

What forms do you envision for Junction Hollow's water?

# Station 4: Entrance from The Run

What kind of entrance would you like to be created for the park?

How do you currently recreate in Junction Hollow?

# Online Survey

How do you use Panther Hollow (Schenley Park)?

What features of this area do you like?

# Concept Image Feedback: Lake Inlet

## SITE 1: Phipps and Panther Hollow Confluence

## Concept images feedback: Phipps and Panther Hollow Confluence

One solution could include creating a system to manage the flow of water from the two streams called Phipps and Panther Hollow Run that empty into the Lake. This would also provide a vista and entrance to the Lake. What are your thoughts on the concept images above?

# Concept Image Feedback: Lake Inlet

*"I always thought the way the stream entered into the lake was good for contemplation early in the morning, with the fog in the air."*

*"If you envision a pretty place to congregate, then something akin to the water steps adjacent to PNC Park will do. For a city park, I would prefer something more wild and natural, as the photo to the left. My perspective is that of a conservationist and an angler."*

Prefer a "natural" solution: 75

# Concept Image Feedback: Wetland

## SITE 2: Panther Hollow Wetland and Streams

## Concept images feedback: Panther Hollow Wetland and Streams

One solution could include improving the ecological health of the wetland by slowing water flow, collecting sediment, and providing learning opportunities. What are your thoughts on the concept images above?

# Concept Image Feedback: Wetland

*"I like these. The boardwalks make the space accessible without interfering with nature or making the areas look overly engineered."*

*"I bet the sounds from wetlands animals in these areas would be a very relaxing break from city noises."*

Other notable comments: mosquitos, width of pathway, interpretive signage, education opportunities, maintenance

# Concept Image Feedback: Lake

## SITE 3: Panther Hollow Lake

## Concept images feedback: Panther Hollow Lake

One solution could include naturalized edges around the lake that absorb stormwater, with places and structures for people to approach the water's edge. What are your thoughts on the concept images above?

# Concept Image Feedback: Lake

*"I like the idea of being able to approach the water. Water is such a wonderful and calming substance."*

*"Stunning. While restoring the lake should be a priority and I support naturalized edges as part of that (with access), a better trail is a must. I understand if it needs to be offset further away from the lake."*

Other notable comments: concerns about stagnation, maintenance; desire for fishing, boathouse or similar structure,

# Concept Image Feedback: Lake Outlet

## SITE 4: Lake Outfall

## Concept images feedback: Lake Outfall

One solution could include a pipe to carry excess water from the lake into a new, above ground stream system to remove stormwater from sewers, plus a connection for people to legally cross the train tracks. What are your thoughts on the concept images above?

# Concept Image Feedback: Lake Outlet

*“people will never, ever, ever not cross those tracks.  
create the infrastructure to do it properly”*

*“Definitely daylight as much of the stream as possible. Our region's water system is an asset that should be lauded, not pumped under the ground for no one to see and experience.”*

EVERYONE CROSSES THE TRACKS!

# Site 2 – Learning spaces

What educational opportunities do you see for Junction Hollow?

*“Make this an opportunity for children to learn and appreciate the environment and green ideas while in the middle of their hometown... We need to teach the importance of these principles to children.”*

*“Create and design signage explaining the stormwater management strategies, include interactive activities for kids and families to participate in”*

*“There has to be a way to connect it to the Three Rivers Heritage and Hazelwood Trails, and the riverfront. This will allow people to better understand the flow of rain and wastewater in urban places like Oakland down into our main waterways...”*

# Site 3 – Junction Hollow waterways

What form(s) do you envision for Junction Hollow's waterways? How do you want to interact with water?

*"I would prefer wetlands or streams. There is enough concrete in the city already."*

*"I have seen some cities create art with their waterways, and seen videos of places where the water flowing over certain areas creates music. I think you could provide CMU (or another university) students to come up with a creative way to interact with water."*

*"Foremost: functional. Runoff is becoming a major issue for the run, and it would be best to mitigate that if we can."*

# Site 4 – Junction Hollow restoration

How do you currently recreate in Junction Hollow? How might the entrance at the intersection of Boundary Street and Schenley Park (closer to Greenfield/Saline Street) feel more park like/be more welcoming?

*“I bike through Junction Hollow regularly and find both the openness and the frequent utilization of the fields to be very inviting.”*

*“I mostly run along this path and its the most dreary part of my run in the park. More trees would help. The access to the single track (zigzag trail) that climbs back to Bridle Trail is hidden and feels forgotten about.”*

*“Usually I use the trails, I think many people aren’t aware of the fields because there is no clear entrance from Pitt campus”*
