Building Intelligence

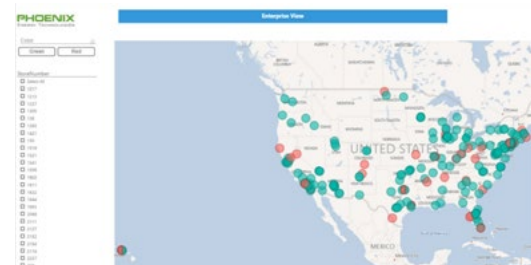

PHOENIXET INTRODUCES SMART BUILDING INTELLIGENCE PORTAL

Building data is hard to gather and consolidate, because of legacy and proprietary building equipment. Energy and facilities teams rely on multiple data sources and manual consolidation to create trends and make decisions. You'll get a real-time summary of energy and dollar savings, cost avoidance, and your best and worst locations at a glance, without the time-consuming manual tasks. While the real-time analytics engine continuously monitors progress towards your smart building goals!

VISUALIZE AND ANALYZE DATA FROM ALL YOUR BUILDING'S IOT DEVICES IN ONE PLACE

INTERACTIVE MAP

Zoom into your area of interest and select the region or building you want to learn more about.

ENTERPRISE-WIDE BUILDING HEALTH AT A GLANCE

Get the current state of your energy usage, comfort and calls/alarms across all your control systems and connected machines in a normalized dashboard. No conversion or legends required.

OVERVIEW

EDX BI Portal brings actionable intelligence to your smart buildings and connected machines. With its powerful analytics and reporting capabilities and automated alerts, BI's intuitive interface to make smart decisions. Combining your energy and machine data with weather, billing, point of sale and more, you've got a complete overview of optimization opportunities.

FEATURES

- Executive Dashboard
- Ad-hoc Report Creation: Intuitive Interface
- Mobile Friendly

"ACTIVE REPORTING"

Automatically take corrective and proactive action based on data trends and anomalies.
