ACTION BOOTH

by A.C.T. DUST COLLECTORS

A.C.T. Dust Collectors is proud to introduce the ACTION Booth. Hundreds of applications require general dust collection from a room, work area, enclosure or zone. Featuring a heavily constructed, louvered door which is one of the largest in the industry, you get maximum dust collection at all work heights. The louvers are designed to assist fallout of heavy particulate while evenly distributing air across the vertical filters inside. The integrated blower and interior pulse clean diaphragm valves provide consistent, quiet and powerful performance. With space at a premium, the ACTION Booth can be serviced from the front and top, allowing installation against walls on the back or sides.

5,400 CFM

	ACTION Booth
# of Filters	4
Filter Area	1,400ft ²
Horsepower	7.5
Height	96"
Width	43"
Depth	47"

DUST COLLECTORS

Air. Captured. Filtered. Delivered.

CASE STUDY

GRINDING EQUIPMENT APPLICATION: DUST COLLECTOR FOR EQUIPMENT CLEANING An ACTION Booth Case Study

Inside Edge Commercial Interior Services is a national commercial flooring company that provides concrete grinders and vac systems for profiling concrete substrates prior to laying a floor. This equipment moves in and out of their facility for routine cleaning and maintenance. The equipment is brought in to a 10' x 8' room for cleaning. Once the machines are thoroughly cleaned, maintenance is performed and the machine is ready to go out to a job site. The ventilation and filter system in their original "equipment cleaning room" was not performing to their expectations and meeting regulations.

The Service Manager at Inside Edge, knew improvements were needed. He reached out to our team at A.C.T. Dust Collectors to schedule a meeting to evaluate the process and determine the best solution. After a site visit, an A.C.T. ACTION Booth Power Module with a HEPA after filter was recommended to replace the existing fan and filter system.

The versatile ACTION Booth system works in a very wide range of dust applications. The team at A.C.T. Dust Collectors was confident this unit would meet the need. The ACTION Booth power module provides maximum efficiency at all work heights as it has one of the largest louvered collection doors in the industry.

The equipment cleaning room was reconfigured and an ACTION Booth Power Module was installed shortly after that. Steve at Inside Edge reports "This system is unbelievable. Our cleaning time per machine has been reduced by over 50%. A.C.T. has been great to work with from the initial site visit, installation of the equipment and employee training. We are very happy with the results!"

A.C.T. Dust Collectors are installed all over North America in many applications. Our experts have the knowledge and skills required to help you resolve the dust problem at your facility using the method most quick and efficient for your plant. Contact Us Today!
