UiPath Developers' Conference

UiPath's Extensibility Features:
Increasing the scope of automation with ABBYY

Alex Dragoi & Alex Statie | Senior RPA Experts

Objectives For Today

Understand the different business cases where ABBYY can be a big differentiator

See integration examples between UiPath and ABBYY

Learn the capabilities and limitations of ABBYY’s product suite

Discover the future roadmap created by UiPath and ABBYY

ABBYY in 30 seconds

Thousands of businesses worldwide rely on ABBYY for converting unstructured data into structured information.

ABBYY sets the global standard in document recognition, content-capture and language based technologies and solutions that integrate across the information lifecycle

ABBYY's innovative Intelligent Capture technology, products solutions and services are delivered in multiple platforms – cloud, mobile, desktop, server or SDK

30.000+ corporate clients, **40M+** users

Technology innovator with **600+ developers** and **100+ patents**

200+ countries and territories covered

ABBYY’s Product suite

OCR, PDF, Text Scanning Software and Solutions

FlexiCapture

FlexiCapture is a highly scalable and universal enterprise capture platform that enables organisations to automatically classify, extract, validate and direct business critical data from incoming customer communications and operational processes – such as customer requests, queries and transactions.

FineReader

FineReader is an optical character recognition (OCR) application.

The software allows the conversion of image documents (photos, scans, PDF files) into editable electronic formats.

Distributed as SDK for easy integration with UiPath robots.

Compreno suite

Compreno is the unique technology of natural language texts processing. Due to over 15+ years of linguistic research, ABBYY has developed the innovative approach to text analysis. That allows to get to the meaning of the text and bring machine analysis a step closer to human text processing.

FlexiCapture capabilities

- Name and address of the business unit
- Name and supplier address (Vendor Recognition)
- VAT-ID of supplier and business unit
- Invoice date, number and delivery date (rule-based, country support)
- Order data (Purchaser, Order-no.)
- Line item data, description, unit amount, tax, unit price and total price
- Currency, net value, tax value and rate, total
- Bank details
- Delivery address, due date (if available)

PLEASE READ CAREFULLY. The terms and conditions set forth herein in addition to those at http://www.safenet-inc.com/resources/documents/General_TermsConditions_FCA.pdf constitute the entire agreement between SafeNet Inc and its Subsidiaries, and the purchaser. SafeNet's acceptance of the purchaser's order and manufacture of the products is conditioned on the purchaser's acceptance of these terms. SafeNet Inc or Subsidiaries will not be bound by any term of the purchaser's order that is inconsistent with, modifies or supplements the terms on this Order Acceptance. Purchaser's acceptance of these terms will be deemed binding ten (10) days after receipt of this Order Acceptance or delivery of the goods, which occurs first.

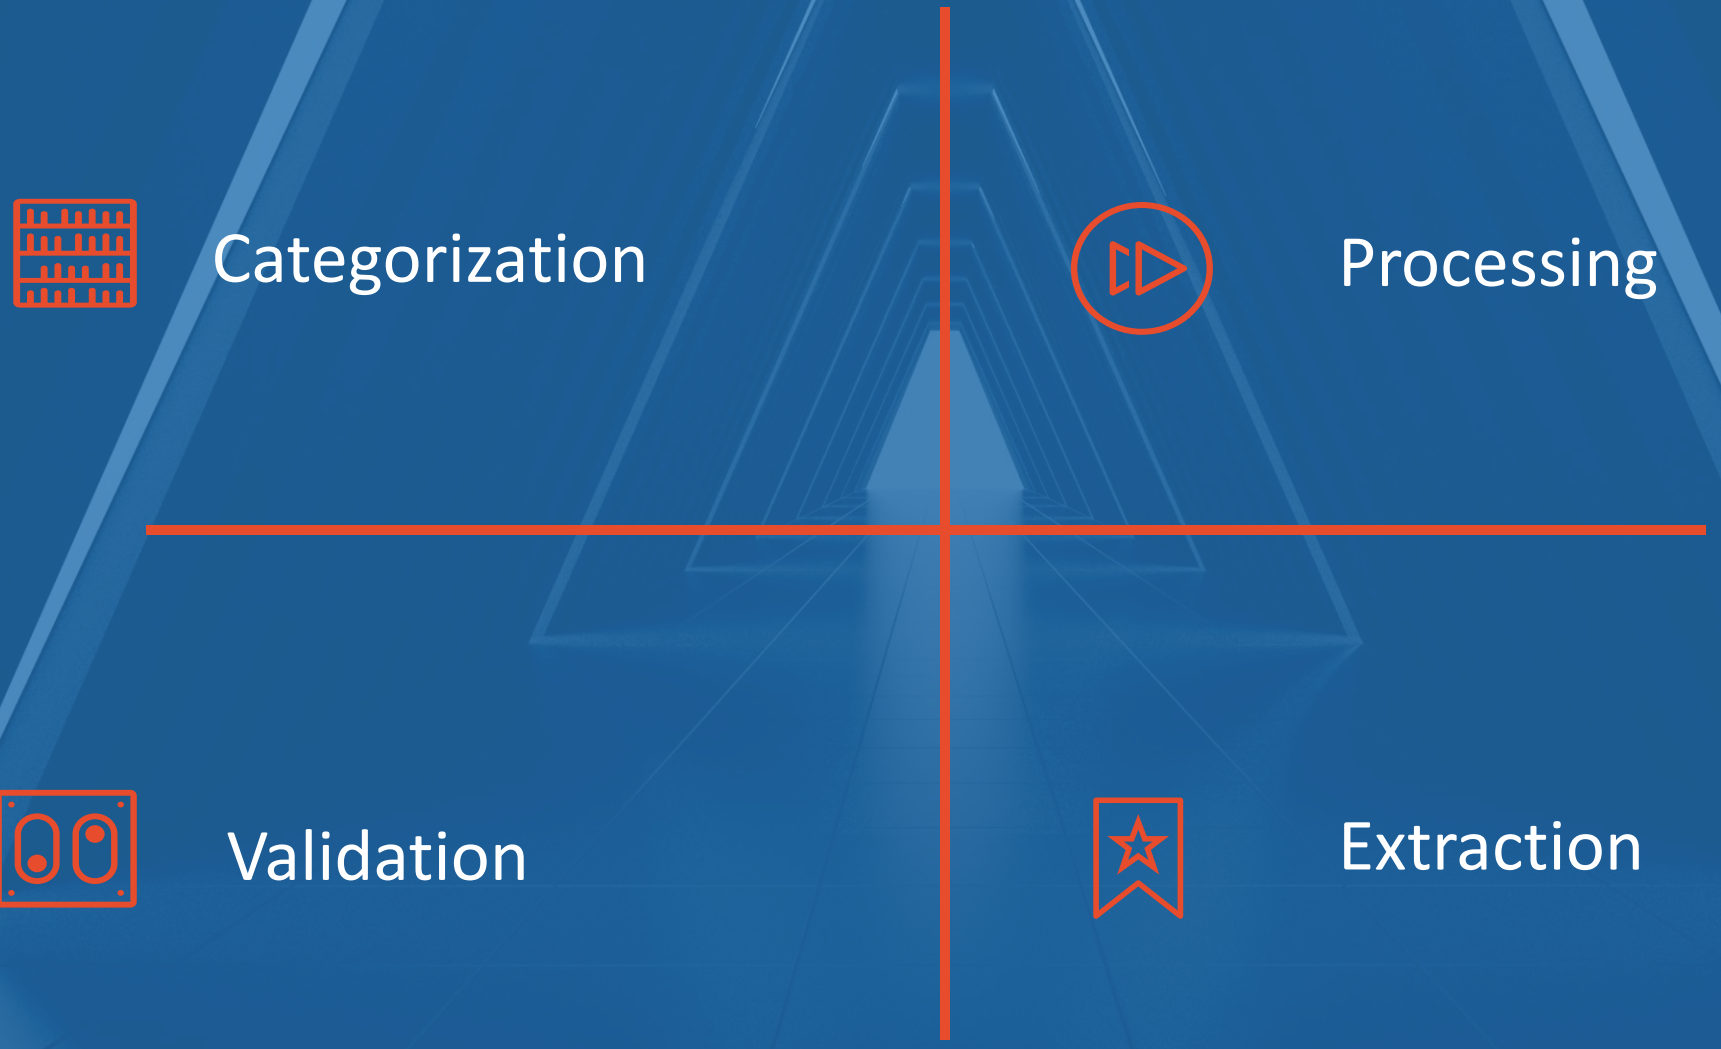
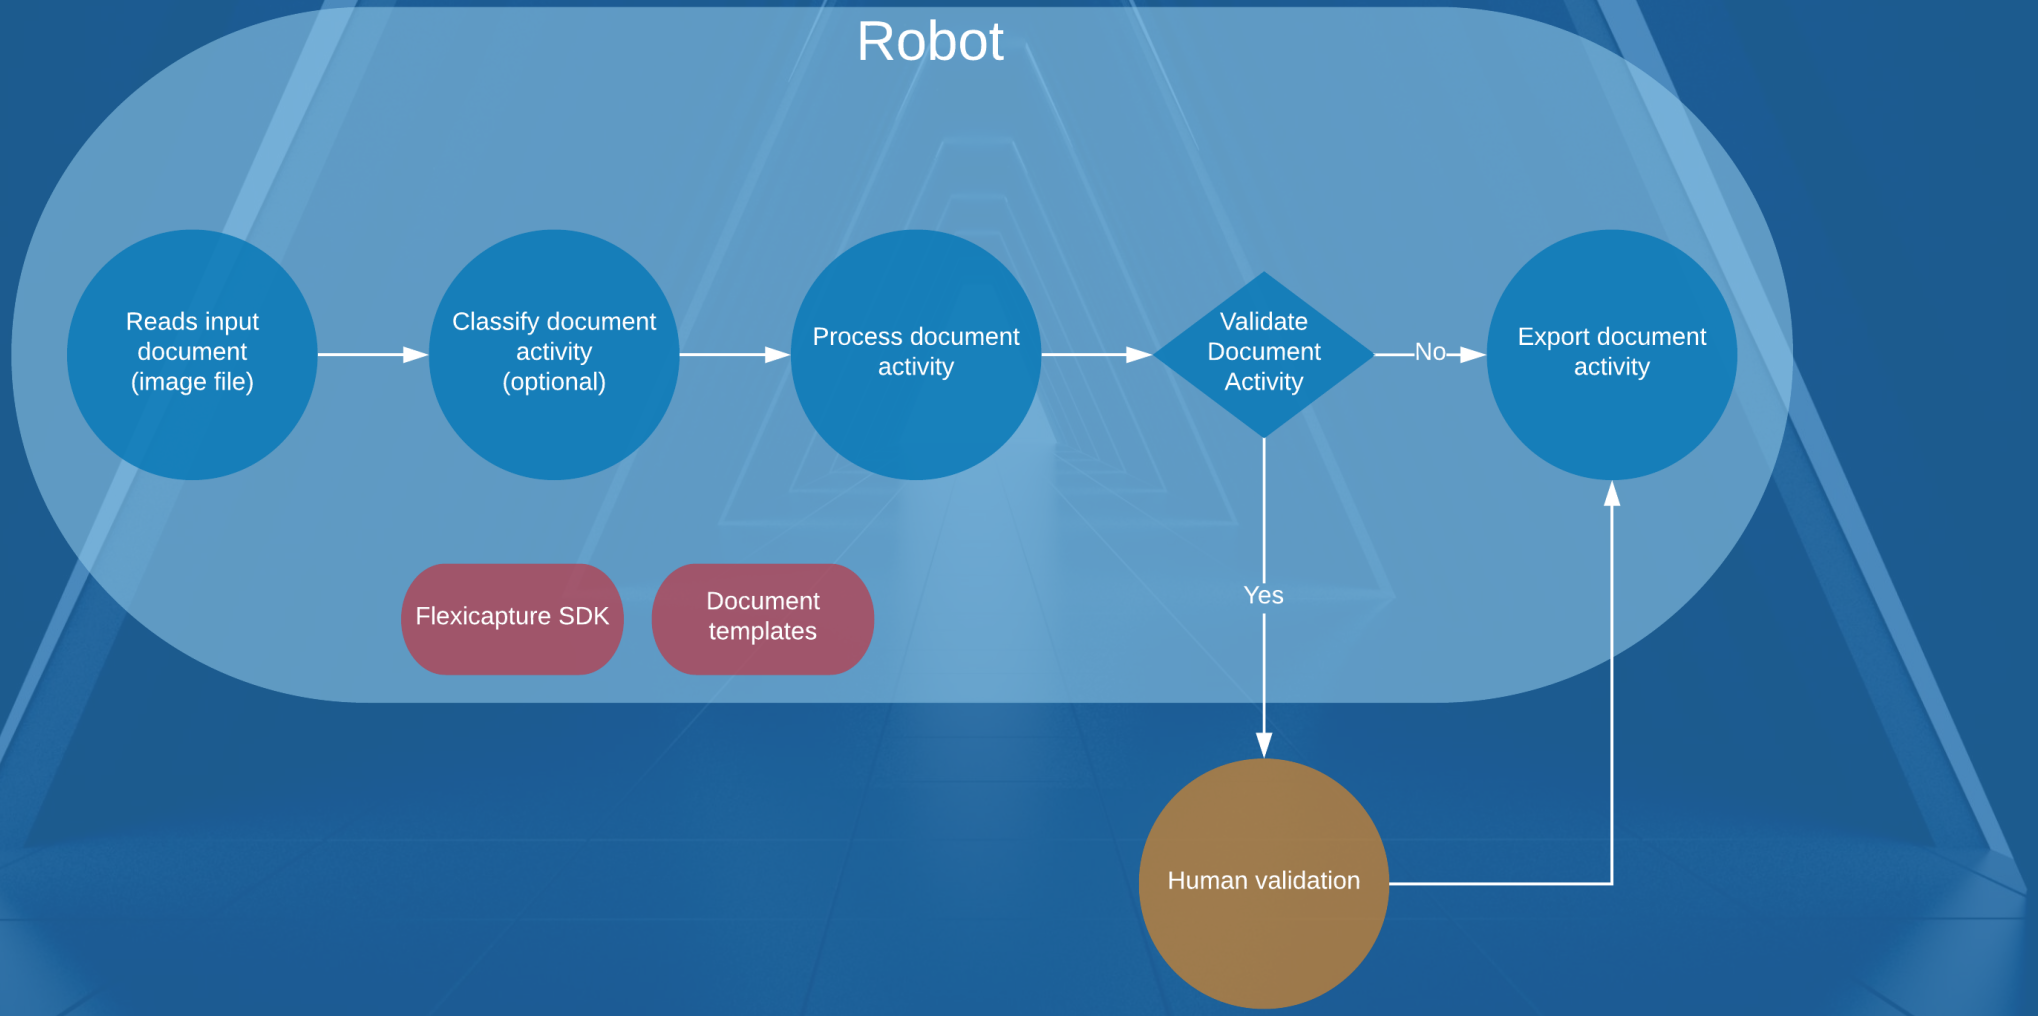
UiPath's **NEW** Abbyy FlexiCapture activities package

Addressing RPA's unstructured data inputs problem

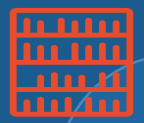


Integration Workflow



Activities for processing documents

From an image to a structure that you can navigate through



ClassifyDocument

classifies an input document (image file), based on an classifier file or a collection of template files

Input

DefinitionFiles (IEnumerable<String>)
ClassifierFile (String)
SourceDocument (String)

Output

Result (String)

ProcessDocument

processes an input document (image file) based on a collection of template files, resulting in recognized data

Input

DefinitionFiles (IEnumerable<String>)
Document (String)

Output

Result (FlexiCaptureDocument)

ValidateDocument

user validation

Input

Document (FlexiCaptureDocument)

Output

Result (FlexiCaptureDocument)

Activities for extracting specific data

From a document structure to the fields that you need

GetTable

extracts a table from the FlexiCapture documen

Input

Document (FlexiCaptureDocument)
Name (String)

Output

Result (DataTable)

GetField

extracts a field from the FlexiCapture document

Input

Document (FlexiCaptureDocument)
Name (String) : field name
FullName (String)

Output

Result (FlexiCaptureField)

Exporting document data

Providing access to the data that you need in your favorite format

ExportDocument

Exports a doc in a specific format

Input

Document (FlexiCaptureDocument)
ExportFormat (enum, currently XML/CSV/XLS/JSON)
File (string): export file

Output

Result (ExportedDocument)

Classes in the FlexiCapture package

New custom entities to support our activities

FlexiCaptureDocument

an intenal class wrapping a FlexiCapture document; can be serialized/deserialized

Input

Data (byte[])
Confidence (int)

Output

Result (String)

FlexiCaptureField

an intenal class representing field information

Input

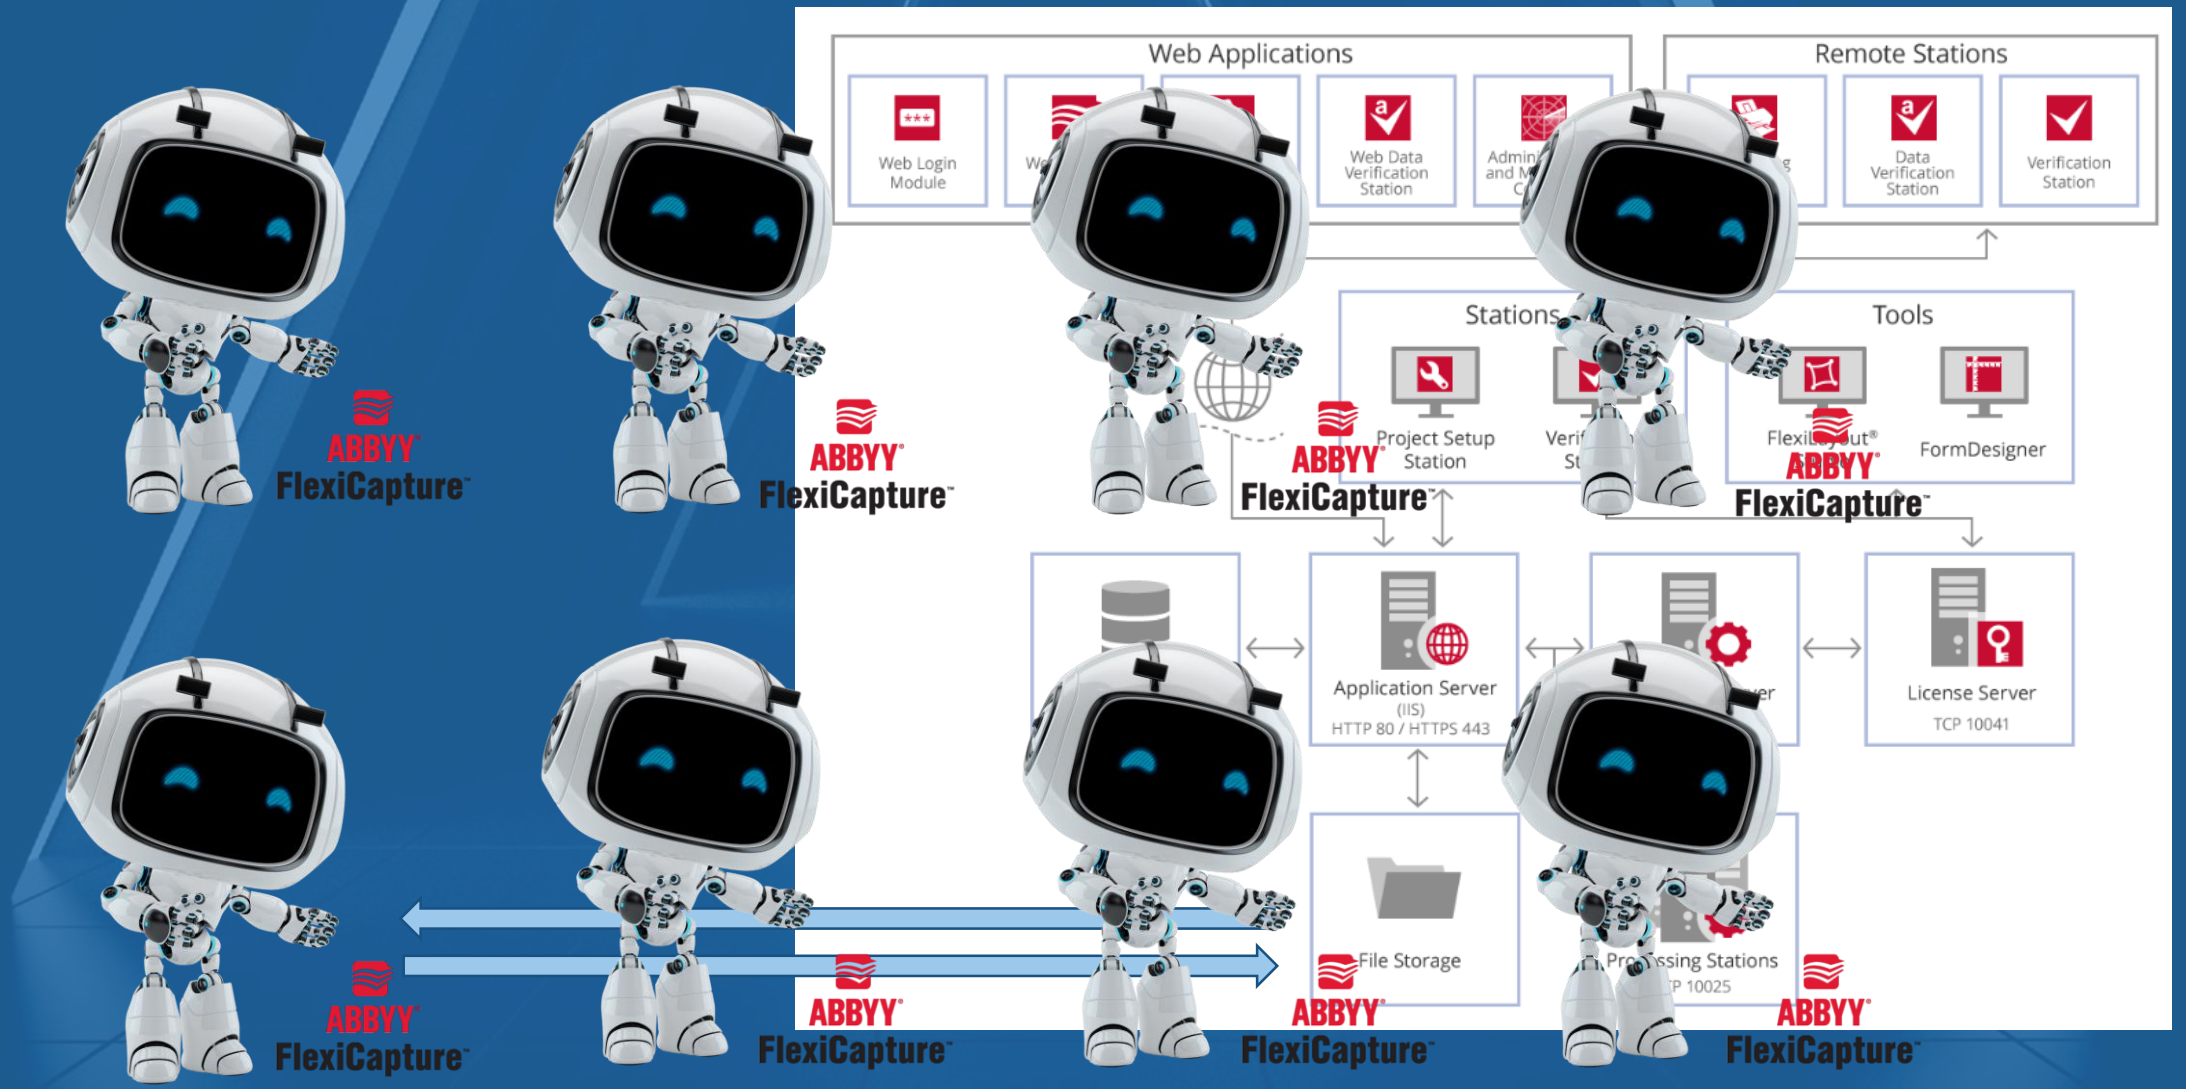
Value (string)
Type (enum)
Confidence (int)

Output

Result (FlexiCaptureDocument)

Benefits of UiPath FlexyCapture activities

Easy deployment & configuration, out of the box redundancy



Business cases for FlexiCapture

Finance
Invoice & receipt processing

Manufacturing
Parts requests from customers

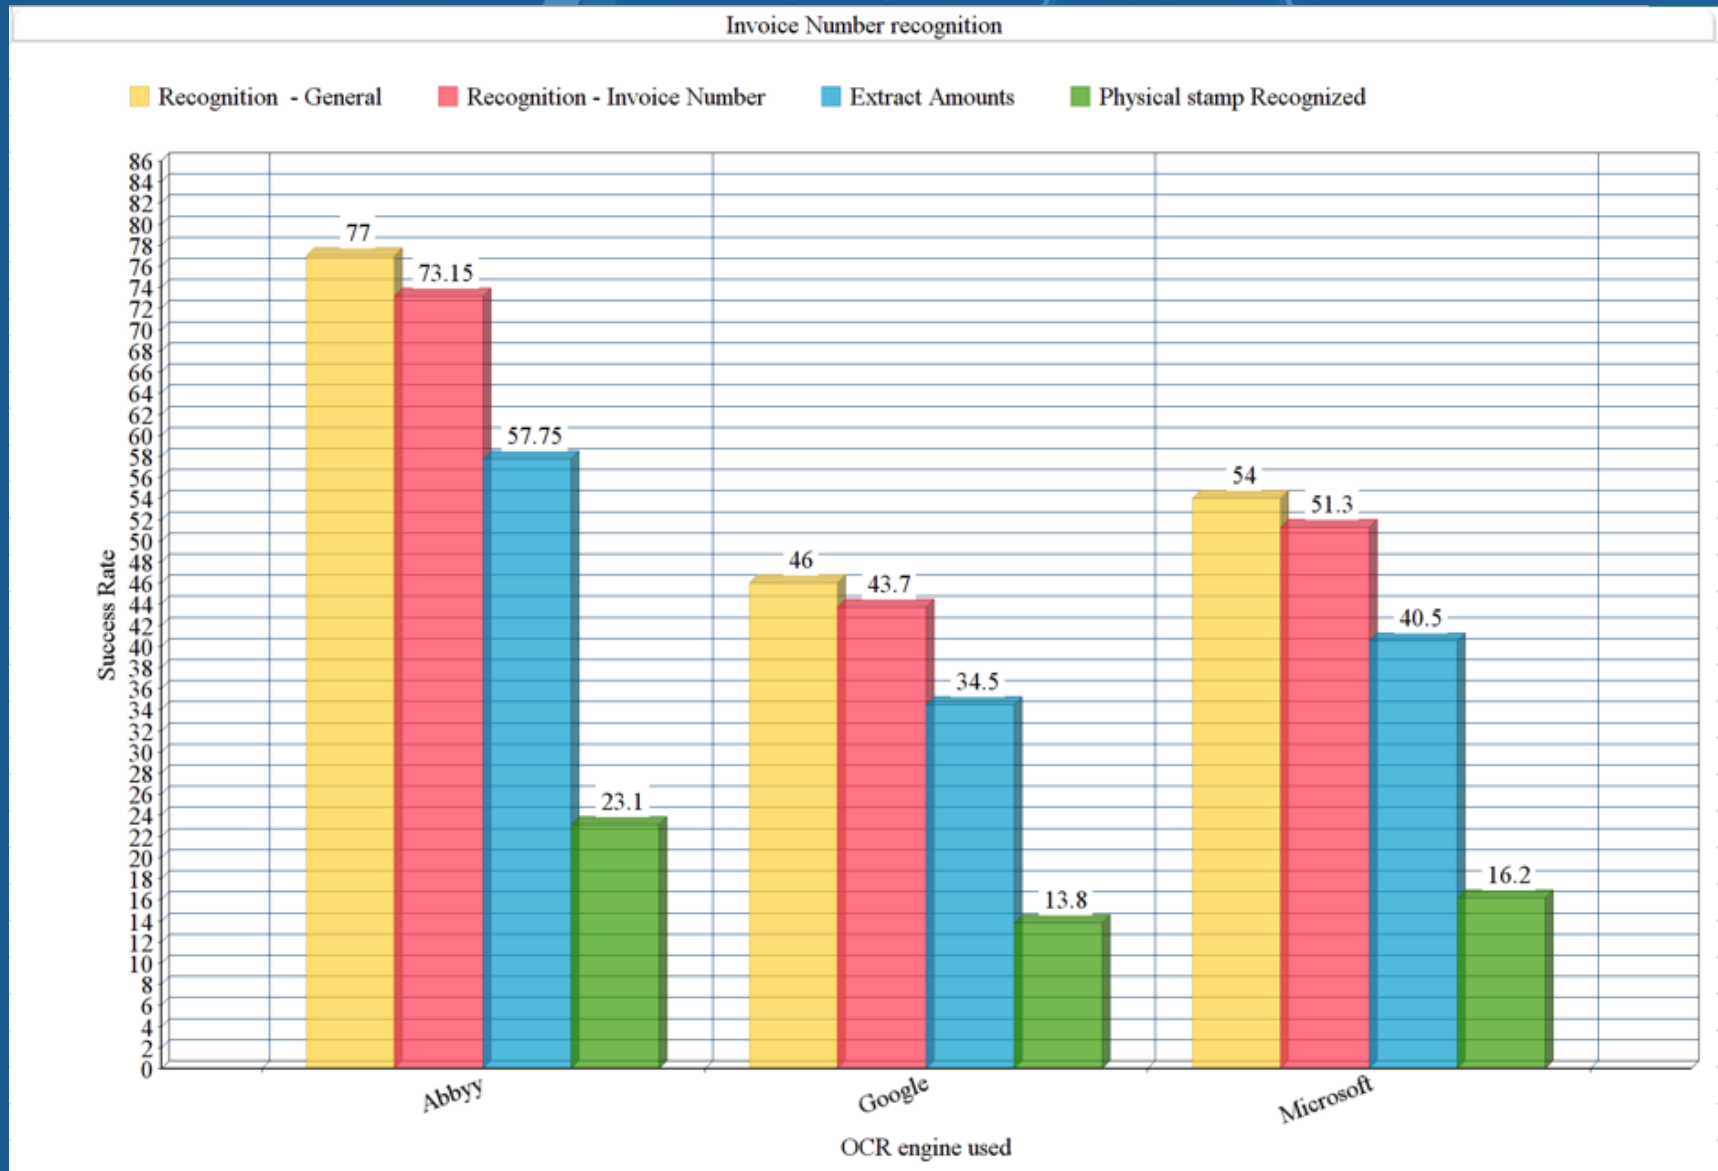
HR
CV scanning and entering candidate data into main system

Healthcare
Automatic processing of patient information on paper

The Only Enterprise RPA Platform
UiPath
FineReader OCR engine

OCR data extraction on invoices

500 documents batch, 20 languages, 24 suppliers



Notes:

Invoice number / reference number extract - 95%

Trouble extracting commas, point, quote, from amount ~ 75 accurate

Potential issue: Depending on OCR that is being used and the template form hard to get the right Invoice No or Numbers (can appear on different lines after using OCR)

No Similarities between templates detected.

physical stamp able to retreive correctly ~ 30%
