

Raval Daily Renewal Cream

Directions?

Apply a thin layer to affected areas twice daily. Skin brightening is a gradual process. Depending on individual's skin condition, noticeable results should be expected in 3 to 8 weeks of daily use. Once the desired results have been achieved, maintain the results by applying a few times per week. As with any skin lightening regimen, the use of a broad spectrum UVA/UVB sunscreen with a minimum SPF of 30 is recommended.

What it is formulated to do?

Reverse the effects of daily exposure to external stressors such as UV rays and dryness. This cream renews the skin's texture to optimize clarity and promote radiance. The powerful formula contains Potent Vitamin C to reduce existing pigmentation and also works by combining the well documented properties of the most beneficial and safest active ingredients. The active ingredients in the formula are derived from natural extracts such as kojic acid ester (from Japanese mushrooms), sodium ascorbyl phosphate (from Vitamin C), niacinamide (Vitamin B3), Alpha-Arbutin, Bearberry extract, and licorice root. **Retinol was added.** This product contains absolutely no hydroquinone or steroids.

Summary Product Description:

Radiant Brightening Cream gradually brightens the skin's color. It also fades discolorations of the skin such as age spots, freckles, or skin pigmentation that may occur from exposure to the sun, during pregnancy, or from the use of oral contraceptives.

Detailed Product Description:

Brightening Skin Cream helps lighten the skin by inhibiting the production of melanin. It is the accumulation of melanin in the skin that is the cause of dark skin color and age spots. As the skin naturally renews itself every 28 days, old pigmented cells are sloughed off and cells with less melanin will be brought to the surface giving the skin a lighter, more even toned complexion.

So what makes the Mix Rx' formula's so unique?

Simply put, research! Though a low grade product might contain similar ingredients, it doesn't guarantee its effectiveness. In order to harness the true power of the active ingredients, great care must be taken when manufacturing the product. Light and air can easily deteriorate substances like Kojic Acid. Other ingredients must be carefully stored in vacuum desiccators in order to preserve their shelf life. Furthermore, the compounding chemist team takes great effort to micronize and alter all of our active ingredients and extracts for superior efficacy.
