

Accounting for your fixed assets before they become fixed assets.

We'll help you piece it together

To get the most out of your fixed assets, you have to account for everything, including fixed assets before they even become fixed assets. Think construction in progress: projects being built, upgraded, renovated, or accumulated prior to being put in service, such as multicomponent equipment, machinery upgrades, and building renovations.

Sage Fixed Assets—Planning is designed to do just that, and it allows you to manage as many projects as you need, regardless of the type or size. And when the assets are ready for use, they can be easily created in Sage Fixed Assets—Depreciation.

To help you easily manage and report on your construction in progress projects, Sage Fixed Assets—Planning has multiple levels of detail tracking including over 45 user-defined fields, as well numerous built-in reports such as project status and actual vs. budget variance. In addition, you can easily manage both capitalized and expensed assets and get key project information at a glance with "Project Snapshot."
