

ANTIMICROBIAL PROTECTION: Keep Your Devices Clean and Safe

“To address our concerns about infection control, CareServ treated our devices with their 24-month self-sanitizing antimicrobial solution. **That’s a must have** in healthcare facilities.”

– Debra Smith, RN TLC Management, Indiana

Got germs? Not anymore.

CareServ’s 24-month self-sanitizing antimicrobial solution helps reduce the spread of bacteria and viruses — so you can provide the best care possible.

Mobile devices have revolutionized healthcare, but they’re also **10x dirtier than a toilet seat.**

Because 80% of infections start with things we touch, you need a **strong defense against creepy crawlies.**

SAY GOODBYE TO BUGS

In healthcare communities, mobile phones and tablets are constantly exposed to germs and bacteria that can harm your residents and team members. To reduce the spread of infections, you need technology that maintains the highest standards of hygiene.

Partnering with leading scientists, we offer the world's safest, most advanced antimicrobial treatment for your devices. Our self-sanitizing coating provides continuous protection against harmful bacteria and viruses for up to two years. After that, we'll retreat each device so your tools stay clean and effective. Boom, baby.

How Our Germ-Fighting Solution Works

With touchless disinfection and light-activated protection, our mobile devices are safe and smart — inside and out. The nontoxic, EPA-approved, two-coat process keeps your devices 99.99% bacteria free for 24 months. And we can even apply it to devices you already own (flip phones included).

Coat 1:

A quick drying antimicrobial layer that ruptures microbe membranes and kills germs on contact.

Coat 2:

An oxidized photocatalyst that decomposes bacteria, mold, fungi, and viruses that cause the spread of infections.

Even when you need to wipe off your devices due to spills or grimy fingerprints, the two-step coating process continues to work. But don't just take our word for it. Antimicrobial Test Laboratories in Round Rock, Texas put our coating through the ringer. Their testing determined that after two years of real-world use in a senior care community, the devices remained clean and safe.

A 99.99% reduction in bacteria and viruses for two full years — don't you wish everything was that safe?

CareServ takes the pain out of healthcare technology by offering tailored solutions designed to fit each senior care community's needs. From infrastructure planning to EHR training and everything in between, we harness the power of geek to keep systems securely humming 24/7. Our philosophy is simple: Never leave our clients in a lurch. Whether it's device monitoring or technical support, we're always on so you can focus on what you do best — caring for seniors.
