

Web-based EDI for Sage Business Cloud Enterprise Management

We Make EDI Painless!

TrueCommerce makes it painless to implement electronic data interchange (EDI), by delivering easy-to-use, robust and affordable solutions.

- TrueCommerce Transaction Manager™ is the only endorsed EDI partner for Sage
- Complete, end-to-end EDI solution for Sage Enterprise Management from one reliable source
- Supports more than 92,000 trading partner maps with updates at no additional charge
- Unlimited, US-based support, free software updates, no annual contracts and no maintenance fees

COMPLETE SOLUTION FROM ONE SOURCE

Our unique modular approach enables us to offer a true end-to-end solution that is easy to use and unparalleled in scalability. We've taken the complexity out of implementing EDI by providing all four of the components you need to successfully deploy EDI:

Connectivity with your trading partner(s) is required to transmit EDI documents, whether directly via the Internet or through a "Value Added Network," or VAN. The TrueCommerce Trading Network (VAN) is our Internet-based transaction gateway, across which your EDI transactions are transmitted, providing connectivity with all of your trading partners. It is compliant with virtually any connectivity protocol, including AS1/AS2/AS3, FTP and VAN interconnects.

Web-based EDI Translation Software, TrueCommerce Transaction Manager™, is our user-friendly translation software that converts business documents from raw EDI data (ANSI ASC X12 and EDIFACT standard) into a human-readable business form.

Data Mapping and Integration provide the ability to seamlessly send and receive information between Transaction Manager and Sage Enterprise Management through the TrueCommerce Business System Plug-In™.

This is achieved by processing EDI transactions through a collection of intelligent software modules. These modules are programmed to format your inbound EDI transactions to match against your configurations within Sage Enterprise Management, as well as match your outbound transactions against your trading partner's requirements. As your business grows and you acquire new customers, additional trading partner maps can easily be added and seamlessly integrated with your TrueCommerce solution.

Support is a critical component of a complete, end-to-end EDI solution. Our Professional Services team has the broad range of expertise to handle not only all of your trading partners' needs, but also any technical issues related to business system integration and the sending and receiving of EDI documents. You can also count on the support team to provide the advice and guidance you'll need to be successful. Even if you aren't familiar or comfortable with EDI, we'll be there to help you get up and running, step-by-step.

TrueCommerce makes EDI painless by providing businesses with complete, end-to-end solutions that are easy to use, robust and affordable – along with market-leading support and services to ensure your success.

Truecommerce EDI Solutions

TrueCommerce Professional Services & Support

ENHANCE PRODUCTIVITY AND REDUCE COSTS BY INTEGRATING EDI WITH SAGE ENTERPRISE MANAGEMENT

Choosing an end-to-end EDI solution that offers a seamless integration with your Sage Enterprise Management system and supports current business processes is a strategic investment that can improve customer relationships, business agility and profitability.

Integrating your TrueCommerce EDI solution with Sage Enterprise Management reduces the need to print or rekey transactions, which makes sales order processing faster and more efficient without sacrificing accuracy. TrueCommerce Transaction Manager offers powerful sales order processing that's robust, affordable and easy to use—enabling you to meet all of your customers' EDI requirements while streamlining order fulfillment.

ENDORSED BY SAGE

TrueCommerce has earned the Sage endorsement for its Sage 100, Sage 300 ERP, Sage PFW and other Sage integrations, and is the only EDI provider to do so. A solution that is "endorsed by Sage" has passed a rigorous evaluation, including strategic, technical and integration criteria. Endorsed solutions are certified to work with Sage's latest releases, and come from an organization that meets Sage's requirement for delivering an "exceptional customer experience."

WEB-BASED EDI

A web-based, integrated EDI solution hosted by TrueCommerce offers Sage Enterprise Management users the advantage of anytime/anywhere access, with no maintenance, backup or update responsibilities.

SALES ORDER PROCESSING

TrueCommerce Transaction Manager integrates the most common EDI documents with your Sage Enterprise Management sales order module, including sales orders, invoices, purchase order acknowledgements and deliveries. By integrating your EDI process, manual data entry is minimized while yielding a highly automated, efficient and easy-to-use solution that is ideal for manufacturers, distributors and retailers.

BUILT-IN PROCESS CONTROLS

TrueCommerce Transaction Manager ensures that required data, requested by your customer, has been entered correctly and will notify you of invalid fields prior to sending your transactions. The EDI solution maintains the integrity of your system by automatically validating unit pricing, duplicate purchase order numbers, items and other order data before sending transactions to Sage Enterprise Management. Likewise, it automatically translates between trading partner order data in the EDI system and your customer and item data, eliminating the need to manually match and re-key the data in these fields. These automated safeguards help to eliminate chargebacks from customers and reduce the turnaround time on orders by ensuring that all EDI documents sent to your customers are complete and accurate.

WAREHOUSE DOCUMENT INTEGRATION

Warehouse document integration offers electronic communication between you and your third party warehouse. Outbound warehouse shipping orders (940) can automatically be created from existing shipments from within Sage Enterprise Management. Additionally, integrated warehouse shipping advices (945) will update existing shipments with package and item contents in addition to shipping information (e.g., tracking, ship weight, quantity); lot and serial numbers are supported, as well as consolidated shipments. Lastly, outbound advance ship notices (ASN) can easily be sent to your customer, based on the information from the 945.

AUTOMATE EVERYDAY TASKS

The TrueCommerce Scheduler™ add-on further enhances this easy-to-use, integrated EDI solution by automatically

importing and exporting specified EDI documents to and from Sage Enterprise Management at scheduled times. Scheduling automated transactions in alignment with your business needs saves you time and reduces manual effort, so you can focus on other tasks. To add further efficiency and value, TrueCommerce EDI Labeling™ automates the creation of UCC/GS1-128 compliant, barcoded labels, so you can meet trading partners' labeling and packing requirements within one solution -- with labeling and packing list template updates included automatically at no charge. You can also choose the TrueCommerce Shipping Module, which integrates Transaction Manager with leading shipping carriers so you can automatically import and export data to and from popular shipping systems like FedEx and UPS.

"We went from being sixty to ninety days behind on our invoicing to being 100% up-to-date the first day we began using the TrueCommerce EDI system."
