# Warehouse Manager

The Datalinx Warehouse Manager for Sage Enterprise Management application (WHM EM) is designed and developed to deliver the key warehousing functionality that today's businesses require, without compromising or taking control from the Sage system.

To satisfy different customer requirements, and complexities within their warehouse operations, Datalinx provides two versions of WHM EM - WHM EM Core and WHM EM Lite.

WHM EM Lite allows simplistic barcode scanning of inventory transactions to Sage EM (X3). WHM EM Core brings warehouse management control and a range of additional rules and business processes. WHM EM Core is considered to be a true Warehouse Management System (WMS).

If your business is managing simple transactions, such as Miscellaneous Issues or Receipts, you can use WHM EM Lite to manage inventory from receipt to despatch. For more complex operations, WHM EM Core provides a full WMS product, with scanning across multiple inventory business processes.

WHM EM Core has the option to purchase Add On modules which typically address very specific areas of a business, such as Tote Handling. These are only available to customers with WHM EM Core and cannot be acquired alongside a Lite version.

The key functional differences between the two versions of the application are detailed in the Feature List within this document. Add-on modules are indicated within the Feature List by an \*.

Please note, it is not possible to implement a combination of Lite and Core users within a single installation. You must choose the most appropriate version of the product for your entire operation. You can, of course, always upgrade from Lite to Core by purchasing the required licences, and simply applying the new licence key. This will retain all of the Lite functionality and unlock all the features of the Core version.

**RECEIPT:**

	WHM Lite	WHM Core
Miscellaneous Receipts	●	●
Ability to configure Multiple Miscellaneous Receipts transactions		●
Receipt and Location Allocation		●
Purchase Order Receipting	●	●
Selection by Purchase Order No.	●	●
Order Selection by Supplier		●
Order Selection by Item		●
