

# WORKFLOW APP BUILDER

Your organization is unique and so are your risk and compliance management data collection requirements. The Workflow App Builder allows you to define your own unique workflow and optimize data collection – anywhere, anytime, from any device.

## INCREASE PRODUCTIVITY, ACCURACY, AND FLEXIBILITY

- Customized processes
- Responsive data entry
- Mobile access anywhere

The Workflow App Builder is a Progressive Web Application (PWA) that enables you to define your own workflow and transform it overnight into a mobile enterprise application with no programming required. Eliminate costly training by placing your users inside an application built specifically for them.

Rapidly convert your paper and/or email processes to mobile solutions that clearly define each step with dynamic forms defined by you that fit your business process. Provide alerts to responsible parties and produce a clear audit trail of the process history. Key elements include:

- A flexible workflow engine that allows you to define your own work process including the forms, steps, participants, and email notifications
- Compatible with any modern device, with or without an Internet connection – no App download required!
- Powerful form designer to easily create fully responsive forms to ensure the user only sees/enters information that is applicable for any given item.
- Simple search to easily see the status and contents of each item
- Permissions settings to ensure end users only see the data that is relevant to them.
- Document management for files and photographs associated with your process

## PROCESS ACCOUNTABILITY

Ensuring adherence to a process is no longer a time-intensive activity. Applications created using the Workflow App Builder allow organizations to quickly identify the current/next steps in any process and who is responsible.

## ACCESS ANYWHERE

Need mobility? No problem. Apps created using the Workflow App Builder are Progressive Web Apps accessible on any modern browser and device, enabling you to access your data in the field via a mobile device (such as an iPad or iPhone) and at your desktop. It even works without an internet connection!

## CONVERT BUSINESS DATA TO BUSINESS VALUE

All data collected using the Workflow App Builder is available in the Enviance Portal. Create your own dashboards to slice, dice, and visualize your data to deliver key insights relevant to your business.
