auditapp

apps | *enviance*®

See a visual representation of your audit metrics, slice and dice the data in different ways and drill down into underlying findings and corrective actions.

The Power and Sophistication of Enviance is Available In An Intuitive AuditApp

The AuditApp is an easy to use solution that allows customers to manage the entire audit process in one place from audit planning to performance metrics.

Key elements include:

- "At a glance" map view of your facilities and their audit performance
- Pinch, zoom, scroll, and filter to select regions, facilities, or facility types
- Drill down to see facility details, past audits, audit results, and performance
- Analyze performance on- the-fly by media, manager, or business
- Initiate a new audit and tap to select categories to build your audit checklist
- Conduct your audit on a mobile device: document findings, comments, and set corrective actions with the sound of your voice
- Track, manage, and complete corrective actions, and audits, then instantaneously score and compare performance
- View up to the minute results of your entire program in a graphical dashboard, analyze on the fly, and drill down for details

BUILD A Foundation

Customers can use their own library of audit questions or import applicable regulations from a content provider like BBNA. These audit items can be standardized across all facilities, or tailored to display only questions and areas which are applicable to the chosen facility.

SIMPLIFY THE Process

The AuditApp's interface is designed to streamline the audit process. The Audit form itself gives the auditor a single location to provide status, comments, findings and even attach pictures for each audit item. Users have one space to view the all audit findings, assign and complete corrective actions, as well as reference results of previous audits.

SEE Results

Once the audit is complete the AuditApp allows users to not only track corrective actions to completion but also quickly see the performance of nearby facilities and compare results to facilities around the globe, with the swipe of a finger. Users can see visual representation of audit metrics, slice and dice the data in different ways, and drill down into the underlying findings and corrective actions.

NEED MOBILITY? No Problem

Enviance Apps can be used on any HTML5 browser, enabling you to access your audits in the field via any mobile device (*iPad, iPhone, tablets/phones using Google Chrome*) and at your desktop.
